*Handbook of Empirical Corporate Finance* Bjørn Espen Eckbo, 2011-10-13 This second volume of a two part series examines three major topics First it devotes five chapters to the classical issue of capital structure choice Second it focuses on the value implications of major corporate investment and restructuring decisions and then concludes by surveying the role of pay for performance type executive compensation contracts on managerial incentives and risk taking behavior In collaboration with the first volume this handbook takes stock of the main empirical findings to date across an unprecedented spectrum of corporate finance issues The surveys are written by leading empirical researchers that remain active in their respective areas of interest With few exceptions the writing style makes the chapters accessible to industry practitioners For doctoral students and seasoned academics the surveys offer dense roadmaps into the empirical research landscape and provide suggestions for future work Nine original chapters summarize research advances and future topics in the classical issues of capital structure choice corporate investment behavior and firm value Multinational comparisons underline the volume's empirical perspectives Complements the presentation of econometric issues banking and capital acquisition research covered by Volume 1

**Optimal Bond Trading with Personal Taxes** George M. Constantinides, Jonathan E. Ingersoll, 1983 The assumption that bondholders follow either a buy and hold or a continuous realization trading policy rather than the optimal trading policy is at variance with reality and as we demonstrate may seriously bias the estimation of the yield curve and the implied tax bracket of the marginal investor Tax considerations which govern a bondholder's optimal trading policy include the following realization of capital losses short term if possible deferment of the realization of capital gains especially if they are short term changing the holding period status from long term to short term by sale of the bond and repurchase so that future capital losses may be realized short term and raising the basis through sale of the bond and repurchase in order to deduct from ordinary income the amortized premium Because of the interaction of these factors no simple characterization of the optimal trading policy is possible We can say however that it differs substantially from the buy

and hold policy irrespective of whether the bondholder is a bank a bond dealer or an individual We obtain these strong results even when we allow for transactions costs and explicitly consider numerous IRS regulations designed to curtail tax avoidance
