Economics of the International Coal Trade Lars Schernikau, 2017-01-02 This book is the 2nd edition of the Economics of the International Coal Trade Coal is the single most

important source of power on our planet and today accounts for 40% of electricity generation and 30% of primary energy The world s appetite for energy is still far from being met Until 2050 an additional 6 billion people will require accessto proper power Why Coal Continues to Power the World introduces the reader to the global coal business its importance its source its global demand supply and trade its use its environmental impact and its future Despite recent price hikes coal does not appear to be a popular subject today which may explain the little attention it receives in the scientific community Since writing the first edition during the commodity super cycle in 2006 2008 the world has changed How has this impacted the global world of coal This book is useful to energy economists businessmen politicians university professors high school teachers students and anyone with an interest in how the world is powered It is also helpful to anyone studying climate change and global warming This new edition of the book includes previously not covered special sections on Coal analysis and sampling with a special section on moisture A technical summary of all key coking coal characteristics in Appendix 2 Coking coal iron ore and the steel industry Cement and petcoke markets Global gas markets and the shale gas revolution in the US Nuclear energy and the history of the oil market Renewable energy and the German Energiewende Power plant technology and CO2 sequestration and processing The role of CO2 and why man made CO2 does not cause global warming Apart from giving an in depth overview of the global coal business in this book the author argues that coal is far from dead Some of my key messages are contrary to popular beliefs The importance of coal will further increase in absolute and likely even in relative terms for decades to come Man made CO2 has no effect on global temperatures and combustion of fossil fuels does not influence the weather We cannot stop the advance of coal we can only make this process as environmentally sustainable as humanly possible Therefore mankind needs to embrace coal as the bridge from the Oil Age to the Solar Age through the New Energy Revolution 4 Industrialized nations have to invest in coal and in all means to more efficiently burn coal in order to truly help the global environment and reduce global dust SOX and NOX emissions **New Outlook** ,1915
