Martínez, 2014-01-05 A student in class asks the math teacher Shouldn't minus times minus make minus Teachers soon convince most students that it does not Yet the innocent question brings with it a germ of mathematical creativity What happens if we encourage that thought odd and ungrounded though it may seem Few books in the field of mathematics encourage such creative thinking Fewer still are engagingly written and fun to read This book succeeds on both counts Alberto Martinez shows us how many of the mathematical concepts that we take for granted were once considered contrived imaginary absurd or just plain wrong Even today he writes not all parts of math correspond to things relations or operations that we can actually observe or carry out in everyday life Negative Math ponders such issues by exploring controversies in the history of numbers especially the so called negative and impossible numbers It uses history puzzles and lively debates to demonstrate how it is still possible to devise new artificial systems of mathematical rules In fact the book contends departures from traditional rules can even be the basis for new applications For example by using an algebra in which minus times minus makes minus mathematicians can describe curves or trajectories that are not represented by traditional coordinate geometry Clear and accessible Negative Math expects from its readers only a passing acquaintance with basic high school algebra It will prove pleasurable reading not only for those who enjoy popular math but also for historians philosophers and educators Key Features Uses history puzzles and lively debates to devise new mathematical systems Shows how departures from rules can underlie new practical applications Clear and accessible Requires a background only in basic high school algebra The Latest and Best of TESS, 1991 A Manual of Ethics John Stuart Mackenzie, 1897 **A Manual of Ethics** John Stuart Mackenzie, 1901 A Manual of Logic James Welton, 1896 **Notices of the American Mathematical Society** American Mathematical Society, 1978 *Manual of Psychology ...* George Frederick Stout, 1899 A Manual of Logic James Welton, 1907 **Aristophanes: Ranae, a close tr., with test papers, by F.G.
