

GEAR SELECTION

FIG. 28 Tractor is equipped to provide eight forward gear speeds and two reverse gear speeds. Transmission shift lever, 1, provides four forward gears and one reverse gear. These gear selections are interrupted by range shift lever.

Range shift lever, 2, provides two ranges in each transmission gear speed. This lever allows most change in ground speed.

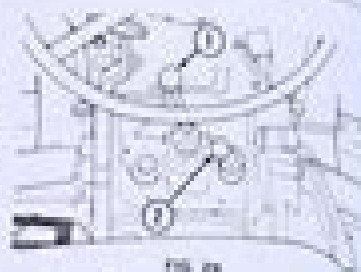

FIG. 28

FIG. 29 Shift pattern and arrangement of gear speeds in range from slow to fast are shown in right. Reverse clutch pedal and parking shift levers in reverse position. Release parking brake lever and brake pedals, then slowly release clutch pedal.

Should engage transmission gear and/or range to desired range, depress clutch and brake pedals (keeping the tractor) select the desired gear and continue with tractor operation.

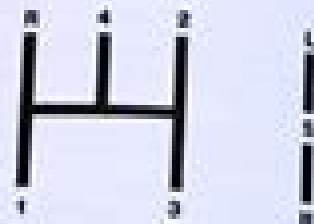

FIG. 29

IMPORTANT: Depress clutch and one brake before shifting range and/or transmission gear lever.

Select the gear which will give the best fuel consumption without overloading the engine. Remember that ground conditions in the same field may vary, therefore select the gear which maintains all speeds satisfactorily and still provides some reserve power for tough spots.

IMPORTANT: Never use the tractor in "lipping" the clutch and avoid "riding" the clutch pedal. This clutch will cause overheating and eventual clutch failure.

CAUTION: Never coast down slopes with the clutch disengaged (pedal depressed) or with lever in neutral.

Position du levier de changement de vitesse		Vitesse d'avancement	
Gears	Range	KM/H	Mph
RANGE 1 (Slow)			
Reverse	1	2.40	1.49
	2	3.52	2.19
	3	4.48	2.80
	4	7.92	4.92
Range	1	9.60	5.97
	2	14.08	8.75
	3	14.08	8.75
	4	21.70	13.49
RANGE 2 (Fast)			
Reverse	R	5.27	3.28
Range	R	13.08	8.13

La vitesse d'avancement peut se varier de 20% correspond à un régime moteur de 2400tr/min sans surcharger le moteur de 14 à 18 de la table ci-dessus.

BRAKE USAGE

FIG. 31 Brake pedals, 1 and 2, may be used independently or one applied to assist in slowing of tractor when used in the speed operation. Release brake pedals and use as required to slow and stop.

When tractor is in operation or being used in higher rate of speed brake pedals must be released before activating 2 wheel drive and apply independently.

CAUTION: Do not use one wheel braking at high speed. Always keep both brake pedals together when tractor is being transported. Make sure brakes are released easily.

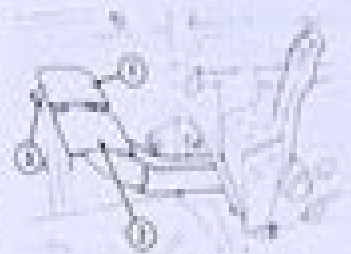

FIG. 31

DIFFERENTIAL LOCK

FIG. 32 Differential lock pedal, 1, should only be depressed when required as effectiveness of the steering is greatly reduced. To engage differential lock, depress clutch pedal and when all rear wheel movement ceases, carefully depress lock pedal and slowly engage the clutch.

When further use of differential lock is not required, release differential lock pedal. Pedal should normally return to the "off" position. On release the differential lock pedal this return is instantaneous after time is removed from pedal due to a spring difference between the forward wheels. In this case, depress clutch pedal and keep the wheels stationary while tractor is in motion to release the pedal.

IMPORTANT: Do not engage differential lock with one wheel spinning. Excessive engine strain will result.
