**Cognition and Interaction: From Computers to Smart Objects and Autonomous Agents** Amon Rapp,Maurizio Tirassa,Tom Ziemke,2019-10-10 Cognitive sciences have been involved under numerous accounts to explain how humans

interact with technology as well as to design technological instruments tailored to human needs. As technological advancements in fields like wearable and ubiquitous computing, virtual reality, robotics and artificial intelligence are presenting novel modalities for interacting with technology, there are opportunities for deepening, exploring and even rethinking the theoretical foundations of human technology use. This volume, entitled *Cognition and Interaction: From Computers to Smart Objects and Autonomous Agents*, is a collection of articles on the impacts that novel interactive technologies are producing on individuals. It puts together 17 works spanning from research on social cognition in human-robot interaction to studies on neural changes triggered by Internet use that tackle relevant technological and theoretical issues in human-computer interaction, encouraging us to rethink how we conceptualize technology, its use and development. The volume addresses fundamental issues at different levels. The first part revolves around the biological impacts that technologies are producing on our bodies and brains. The second part focuses on the psychological level, exploring how our psychological characteristics may affect the way we use, understand and perceive technology, as well as how technology is changing our cognition. The third part addresses relevant theoretical problems, presenting reflections that aim to reframe how we conceptualize ourselves, technology and interaction itself. Finally, the last part of the volume pays attention to the factors involved in the design of technological artifacts, providing suggestions on how we can develop novel technologies closer to human needs. Overall, it appears that human-computer interaction will have to face a variety of challenges to account for the rapid changes we are witnessing in the current technology landscape.

**House documents**, 1892      **The Genus Pinus**, Nicholas Tiho Mirov, 1967 Preface: Working for many years with pines I have been asked many questions I could not answer. Often I have thought how useful it would be for both the curious layman and the busy scholar to have assembled together as much information as possible on pines. Being a biologist I am primarily interested in the biology of pines: their origin and development, their chemical composition and their physiological processes. These considerations have naturally led me to the past and present distribution of pines. Difficulties of presenting these aspects of the subject are many. The literature on pines is enormous; it is scattered through scientific, trade and popular journals. What should be included and what omitted were not easy decisions. For instance, chemical components of pine and wood are considered but physical properties of pine lumber are not, although there is a wealth of published information in that field. Keeping in mind the traditional remoteness of chemistry from plant taxonomy I have perhaps oversimplified in a conciliatory mood the presentation of the chemical aspects of pines. On the other hand I have attempted to make the presentation of taxonomy palatable to chemists who are not always concerned with the ways and rules of classifying plants and are apt either to disregard accepted nomenclature entirely or to accept it in an amazingly uncritical manner. Our

knowledge of the genus *Pinus* is rather uneven Certain groups of chemical substances polyphenols terpenes have been studies extensively others such as fats are still known only sporadically Alkaloids have been discovered in some pines only recently Some physiological processes such as mineral nutrition have been investigated more thoroughly than others for example transpiration Such unevenness will be noticed throughout the book I have attempted to give answers to many questions about pines many have remained unanswered and new ones have arisen I have even attempted to offer some generalizations and speculations hoping that their presentation would not be condemned as heresy but rather would be accepted as a stimulus to more research along controversial lines I have always been encouraged by Darwin's remark in one of his letters to Wallace that without speculation there would be no progress N T Mirov Berkeley California January 1967
