Microchip Manufacturing:

Making Microchips Jan Mazurek, 1998-12-07 An examination of the environmental and economic implications of the computer microchip industry's exodus from California's Silicon Valley to New Mexico Virginia Ireland and Taiwan In *Making Microchips* Jan Mazurek examines the environmental and economic implications of the computer microchip industry's exodus from California's Silicon Valley to New Mexico Virginia Ireland and Taiwan Globalization economic restructuring and changing manufacturing processes in this rapidly growing industry present difficult new questions for environmental policy Mazurek challenges the assumptions of U S policies designed to promote the competitiveness of domestic microchip makers She argues that although these initiatives focus on the economic effects of environmental regulation they fail to acknowledge how economic and organizational changes within the industry collide with and often confound efforts to monitor and manage pollution from chemicals used in microchip manufacturing Despite its reputation as a clean industry microchip manufacturing is fraught with hazards More than sixty dangerous acids solvents caustics and gases are used to make microchips and some of them are suspected to be carcinogens and or reproductive toxins Mazurek describes the environmental by products of chipmaking including soil contamination air and water pollution and damage to human health Applying insights from economic geography to questions of how and where companies organize production she shows how Silicon Valley played a pivotal role in the development of the microchip Pairing federal environmental data with structural and geographic information on the six firms that continue to build wafer fabrication plants in the United States she demonstrates how reorganization and relocation of manufacturing facilities divert attention from trends in toxic emissions and how they complicate public and private efforts to improve the industry's environmental performance In the concluding chapter Mazurek marshals her findings in a broader analysis of the expansion of global manufacturing and the resultant environmental problems *Microchip Fabrication, 5th Ed.* Peter Van Zant, 2004-06-09 The 1 book in the industry for more than 15 years Utilizing a straightforward math free pathology this is a novice friendly guide to the semiconductor fabrication process from raw materials through shipping the finished packaged device Challenging quizzes and review summaries make this the perfect learning guide for technicians in training NEW chapter on nanotechnology NEW sections on 300mm wafer processing Processes and devices and Green processing Every chapter updated to reflect the latest processing techniques

Rise of Microchip Manufacturing in India Jiteshwar Kumar Pandey, 2024-08-02

Microchips, also known as semiconductors or integrated circuits (ICs), are the foundational technology behind the digital age. They power everything from smartphones and computers to automobiles and industrial machinery. As the world increasingly depends on digital technology, the demand for advanced microchips has surged, making the semiconductor industry a critical component of the global economy.

India, known for its robust IT services sector and a rapidly growing economy, has long aspired to establish itself as a significant player in the global technology landscape. However, the country has historically lagged in semiconductor manufacturing, relying heavily on imports to meet its domestic demand. Recognizing the strategic importance of self-reliance in this critical industry, the Indian government has launched numerous initiatives aimed at developing a domestic semiconductor ecosystem.

The journey of microchip manufacturing in India can be traced back to the early 21st century with sporadic attempts at establishing semiconductor fabrication plants, commonly known as fabs. However, these efforts faced numerous challenges, including high capital costs, insufficient infrastructure, and a lack of skilled manpower. Despite these obstacles, the vision of a self-reliant semiconductor industry persisted, driven by the need to support India's burgeoning electronics and information technology sectors.

In the last decade, there has been a renewed focus on building a comprehensive semiconductor ecosystem in India. The government has announced several policy measures, including financial incentives to attract investment in semiconductor manufacturing. Initiatives like the Make in India campaign and the Atmanirbhar Bharat (Self Reliant India) mission have emphasized the importance of developing domestic capabilities in high-tech manufacturing sectors, including semiconductors.

In 2021, the Indian government launched the Production Linked Incentive (PLI) scheme for the electronics and semiconductor industries, aiming to boost local production and attract global players. This scheme, along with other measures such as the establishment of semiconductor research and development centers, has started to create a more conducive environment for the growth of the industry. Emerging technologies such as artificial intelligence (AI), 5G, the Internet of Things (IoT), and quantum computing rely heavily on advanced semiconductors. India
