Microwave Spectroscopy A L Schawlow:

Microwave Spectroscopy Charles H. Townes, Arthur L. Schawlow, 1975-01-01 Two Nobel Laureates present a systematic comprehensive account of the theory techniques experimental data and interpretation involved in the study of microwave spectroscopy a subject relevant to nuclear physics molecular structure chemical kinetics quantum electrodynamics and astronomy The material in this volume is discussed critically systematically and in the simplest form The simplicity of the wording and mathematics makes most of the contents accessible to those with a very elementary knowledge of quantum mechanics and atomic physics Although the treatment is continuously developed each of the 18 chapters is self contained Nearly 200 tables and figures augment the text Appendixes supply most of the background for research and interpretation of microwave spectra they also contain extensive data on nuclear and molecular constants including essentially all those determined by microwave techniques Equally suitable for use as a fundamental reference or advanced textbook U S Quarterly Book Review **Microwave Spectroscopy [by] C.H. Brown, Alan Carrington, 2003-04-10 The definitive text on the rotational spectroscopy of diatomic molecules High-Resolution Spectroscopy of Transient Molecules Eizi Hirota, 2012-12-06 It is a great challenge in chemistry to clarify every detail of reaction processes In older days chemists mixed starting materials in a flask and took the results out of it after a while leaving all the intermediate steps unclear as a sort of black box One had to be content with only changing temperature and pressure to accelerate or decelerate chemical reactions and there was almost no hope of initiating new reactions However a number of new techniques and new methods have been introduced and have provided us

with a clue to the examination of the black box of chemical reaction Flash photolysis which was invented in the 1950s is such an example this method has been combined with high resolution electronic spectroscopy with photographic recording of the spectra to provide a large amount of precise and detailed data on transient molecules which occur as intermediates during the course of chemical reactions In 1960 a fundamentally new light source was devised i e the laser When the present author and coworkers started high resolution spectroscopic studies of transient molecules at a new research institute the Institute for Molecular Science in Okazaki in 1975 the time was right to exploit this new light source and its microwave precursor in order to shed light on the black box
