postgraduate from the year 2017 in the subject Communications Intercultural Communication grade 4 0 course Practicum

language English abstract The purpose of this quantitative project was to examine if the implementation of a mentoring

program for Spanish speaking nurses facilitated improvement in communication This project focused on answering did the

improved communication resulting from the mentoring program lead to improved patient interactions and ultimately

improved patient satisfaction as evidenced by their Hospital Consumer Assessment of Healthcare Providers and Systems

survey results The project studied 78 nurses randomly selected from the nurses on a Southwest telemetry unit Nurses were

then assigned the role of mentor or mentee To qualify as a mentor the nurse had to speak fluent English have an above

average employment evaluation The director of the unit approved the mentor mentee assignments The communication

section of the HCAHPS survey was compared from the time frame in 2016 to the exact same time frame in the year

previously A statistical analysis of the data revealed there was no difference in communication by nurses based on the

mentor mentee program outcomes as demonstrated on the HCAHPS survey results It can be concluded that the mentor

program may not be cost and time effective The study recommends that hospital educators formulate policies that support

effective communication of nurses while also considering the efficient use of nurses time and institutional financial resources

El Paso Texas is fewer than five miles from the United States Mexico border and 81 2% of its residents identify as Hispanic

Many of these residents speak Spanish as their first language the same is true for nurses working in the city and its

surrounding areas Approximately 80% of the nurses in a given unit at the Southeastern Hospital speak Spanish and 90% of

the patients are English speaking Patient satisfaction measured by the HCAHPS is low and for this hospital it appears to result from the number of Spanish speaking nurses that serve patients in these units Evidence suggests that difficulty communicating with patients is common for Spanish speaking nurses and those that speak other non English languages The result is a high turnover rate among nurses as well as poor patient outcomes and satisfaction these results are consistent with what has been observed at Southeastern Hospital      *Leddy & Pepper's Conceptual Bases of Professional Nursing* Lucy J.
