

## Observing Human Traits Lab

**Background:** Physical traits are observable characteristics that are determined by genes. Genes are specific segments of DNA, located on chromosomes that code for a particular trait. Most genes have two or more variations called alleles. Some alleles are dominant over others and dominant alleles will be expressed. An organism's genotype or physical traits are determined by the presence of a dominant allele for the same gene. Recessive traits are expressed when there are two recessive alleles present in the genotype.

Keep in mind that it's not always quite this simple. There are other factors that influence expression, and most traits have several genes that influence them. This lab is just an introduction to dominant and recessive traits. Let's get started!

**Directions:** Circle the phenotype you have for each trait.
