The purpose of the symposium was to stimulate interest in and advance the use of computer-based automation systems for highway organizations and emphasis was on establishing communication among various interested disciplines. The meeting was structured to present and discuss only those systems currently being used or in the process of being implemented. The papers fall into 5 general categories: Rigid Pavement Design Studies, 1962, 1962. Paper 1 reports the results of research initiated to determine a method of measuring bond failure to evaluate the effect of repetitive vertical loads in producing progressive bond failure from crack to crack in continuously reinforced concrete pavements and to determine the magnitude and distribution of bond stresses in the vicinity of cracks. Paper 2 reviews some of the wide variety of concrete pavement designs highway building agencies in Great Britain and the countries of Western Europe use. Paper 3 Recently a new concept in the handling of terminal movement of concrete pavements adjacent to structures has been introduced employing terminal anchorages. Experience to date with these terminal anchorage systems is reported together with their design basis. **A Directory of Computer Software Applications**, 1980. *Transportation Research Record*, 1998. **Transportation Congress**. Annual Meeting, 1956. 19 agencies participated in a correlation study of the necessary thickness of pavement to carry a range of single and tandem axle loads. The results summarized and discussed in this paper show that the different design methods used by the different agencies gave some rather large variations in the thicknesses of pavement as designed for the specified traffic.
