

10 Common PC Problems And Solutions

1. Computer Won't Turn On

SYMPTOMS

1. Computer Won't Turn On

- When you plug in your computer and turn on the monitor, there is no response from the computer and it doesn't turn on. This often means the monitor is not getting its signal from the computer. If your monitor is not receiving a signal from the computer, it could mean either the monitor is not receiving power or the computer is not sending power to the monitor. If the monitor is not receiving power, it may be that the power cord is not connected properly or the power source is not providing enough power to the monitor.
- When you turn on your computer and nothing happens, it may be that the computer is not receiving power or that the power source is not providing enough power to the computer. If the computer is not receiving power, it may be that the power cord is not connected properly or the power source is not providing enough power to the computer.
