Teaching Mathematics in Elementary and Middle School Joseph G. R. Martinez, Nancy Conrad Martinez, 2007. With an emphasis on inquiry and process, *Teaching Mathematics in Elementary and Middle School* embraces active mathematics instruction and the development of mathematical thinking through problem solving. The text challenges future teachers to prepare their K-8 students for a world that requires a higher level of mathematical literacy and enables them to compete in a global society. Teachers will develop their own mathematical abilities, allowing them to help students discover a rich combination of thinking processes and problem solving strategies, raising the learning expectations for all. Unique text features: TIE (Thought Investigation and Exploration) features ask pre-service teachers to develop their own thinking and learning abilities, preparing them to better challenge their students. Mathematics in the Real World, Idea Files, and Teacher Profiles model best practices and supply readers with concrete teaching tools and strategies. Mathematical Thinking, Mathematical Games, and Mathematics and Technology features detail activities to engage and develop students' mathematical thinking. Accompanying student artifacts illustrate the progression of students' conceptual understanding. CD logo replaces bullet. Math Activities CD-ROM provides an outstanding text component containing more than 100 activities that use a three-step process: explore, invent, discover, to foster the development of mathematical thinking through guided inquiry. Aligned with the NCTM standards, each activity is integrated within the text and designed to help develop students' conceptual understanding of mathematics. Mathematics in Literature offers thoroughly developed ideas for using children's literature to create meaningful contexts for mathematics learning. An extensive bibliography that can be used for this purpose appears on the CD-ROM. I think the text is an excellent resource for elementary and middle school methods courses. In particular, I like how the textbook handles the bigger issues such as geometric reasoning rather than just geometry. I also like the excellent foundation in educational research that the textbook provides, as well as some very careful attention and consistent referencing to the NCTM standards and principles. The incorporation of classroom vignettes, teacher illustrations, and samples of student work also all add to the excellent grounding of the text in real-world classroom work. Dr. Neal Grandgenett, University of Nebraska at Omaha. **Journal for Research in Mathematics Education**, 2015. **Teaching Students with Learning Problems in the Inclusive Classroom** Lisa Freund, Rebecca Z. Rich, 2005. For the K-12 special education methods course for future teachers of students with learning problems. Knowing that no one approach to teaching is right for all children all of the time, this comprehensive yet accessible case-based text presents current best practices with the aim of helping prospective teachers learn to tailor instruction to the diverse needs and abilities of students with learning problems. The authors explore the entire inclusion movement and the theories of teaching and learning that inform it, discuss the nature of students with learning problems and the characteristics of effective teachers, and describe a broad spectrum of

proven instructional strategies for all curriculum areas Finally they examine the unique challenges and opportunities that transitions create for students with learning problems Principal ,2007 *Black Issues in Higher Education* ,2004-09
