

CONJURING PROPERTY

JEREMY M. CAMPBELL

The background of the cover is a solid mustard yellow. A large, irregular shape, resembling a piece of torn paper, is cut out from the top half of the cover. This reveals a photograph of a landscape where a forest fire is taking place. In the foreground, there is a dense, dark green forest. In the middle ground, a line of trees is being consumed by bright orange and yellow flames. The sky above the fire is filled with thick, white and grey smoke. The overall composition suggests a theme of environmental destruction and its impact on property.

Pdf Conjuring Property Speculation Environmental Brazilian:

Fixing the Climate Charles F. Sabel, David G. Victor, 2024-04-02 Can the world stop climate change The prognosis is bleak Most efforts to tackle the problem have focused on treaties that require virtually global consensus yet meaningful consensus has been elusive because deep cuts in emissions are expensive and antagonize well organized interests Predictably diplomacy has swung between gridlock and superficial agreements with little impact After three decades of sustained negotiations on global warming emissions have risen by one third Stopping climate warming requires that they be cut essentially to zero Sabel and Victor look to offer a case for optimism by proposing a different strategy to recast climate change as a problem best addressed piecemeal Rather than seeking a grand global bargain they argue that the problem should be broken down into local challenges They call this concept experimentalist governance massive simultaneous searches for local solutions that are scalable to the global level with a focus not on marginal incentives for success but on penalties for repeated egregious failure The authors show through a series of cases how regulators firms farms and NGOs faced with penalty defaults are learning to solve some of the knottiest environmental problems they then propose central mechanisms that could help monitor and review progress establishing which experiments are working and establish new frontiers for experimentation While the threat of impending catastrophe has understandably made debate about climate policy increasingly shrill and polarized Sabel and Victor offer here a guide to institutional design that could finally lead to the politically and economically self sustaining reductions in emissions that thirty years of global diplomacy has not delivered

The Carbon Calculation Raquel Rodrigues Machaqueiro, 2023-03-07 Examines how climate science the policy world and neoliberalism have mutually informed and co constituted each other in order to define the problem of climate change as one of market failure a diagnosis that implicitly restricts the imaginable solutions and concomitant policy debates to ones about how to adjust improve or otherwise rationalize the market This book traces the history through which politics and science have intertwined and informed each other in order to confine debates about how to tackle climate change in ways that pre empt any possibilities other than market based solutions In tracing the emergence of a conceptual apparatus that has come to operationalize greenhouse gases in terms of a singular and simplified unit carbon that can be commodified and a logic that enables transaction of this unit on a global scale this study offers insights into evolving novel forms of transnational governance and rationale for markets as governing tools
