Fischer,2016 **Beyond Embodied Cognition: Intentionality, Affordance, and Environmental Adaptation** Zheng Jin,Maurizio Tirassa,Anna M. Borghi,2019-04-09 **Neo-Spiritual Aesthetics** Lina Aschenbrenner,2023-01-12 Tracing embodied transformation in the context of Gaga the Israeli dance improvisation practice this book demystifies what Lina Aschenbrenner coins as neo spiritual aesthetics This book takes the reader on an analytical journey through a Gaga class outlining the effective aesthetics of Gaga as an example for the broader field of neo spiritualities It distinguishes a threefold effect of Gaga practice from a momentary extraordinary experience to a lasting therapeutic effect and finally Gaga s worldview potential It situates the effect in an assemblage of interrelating aesthetics of environment movement and bodies The book shows why seemingly leisure time activities such as Gaga form fruitful research objects to an academic study of religion and opens up research on neo spiritual practices In understanding the sensory effect of practice and its cultural and social implications the book follows an Aesthetics of Religion approach It departs from the idea that cognition is embodied and that the body is thus central to understanding cultural and social phenomena Drawing upon a wide array of data gathered in the context of Gaga at the Suzanne Dellal Center in Tel Aviv the book weaves together different methods of

discourse ritual movement body knowledge and narrative analysis while acknowledging insights from neuroscience and cognitive science

Neurocinematics: How the Brain Perceives Audiovisuals Celia Andreu-Sánchez, Miguel Ángel Martín-Pascual, José M. Delgado-García, 2025-11-27 This Research Topic is part of a series with Neuroscience and the Media Please see the first edition here Understanding how the brain perceives audiovisuals is a burgeoning field within neuroscience often referred to as neurocinematics This area of research is crucial as it provides quantitative and reliable tools for designing media content based on neural responses rather than subjective reports Identifying patterns that link brain activity with audiovisual characteristics whether format or content related can offer profound insights into brain function in response to different stimuli Recent studies have shown that cognitive deficits can become apparent when perceiving audiovisuals highlighting the potential for developing non invasive tools to address these deficits Despite significant advancements there remain gaps in our understanding of how media content impacts brain activity and consequently behavior and cognition This underscores the need for further investigation into the neural mechanisms underlying audiovisual perception This Research Topic aims to expand our knowledge of neurocinematics an interdisciplinary approach to understanding audiovisual perception through the brain activity of spectators The primary objectives include exploring how the brain processes audiovisuals identifying neural patterns associated with different types of media content and understanding the cognitive and physiological responses elicited by audiovisual stimuli Specific questions to be addressed include How does the brain differentiate between various audiovisual formats What neural mechanisms are involved in the perception of narrative and non narrative content How can this knowledge be applied to address cognitive deficits To gather further insights into the boundaries of neurocinematics we welcome articles addressing but not limited to the following themes Neurocinematics Cognitive neuroscience and the perception of audiovisual content Visual perception of movies Neuroscience methods applied to media content Neurophysiology of media creators Neurophysiology of media viewers Subjective perception of time when watching movies Manuscripts employing techniques that measure the brain activity of viewers such as eye tracking EEG fMRI and fNIRS among others from various approaches are particularly welcome

Conceptual and Interactive Embodiment Martin H. Fischer, Yann Coello, 2015-12-22 This two volume set provides a comprehensive overview of the multidisciplinary field of Embodied Cognition With contributions from internationally acknowledged researchers from a variety of fields Foundations of Embodied Cognition reveals how intelligent behaviour emerges from the interplay between brain body and environment Drawing on the most recent theoretical and empirical findings in embodied cognition Volume 2 Conceptual and Interactive Embodiment is divided into four distinct parts bringing together a number of influential perspectives and new ideas Part one introduces the field of embodied language processing before part two presents recent developments in our understanding of embodied conceptual understanding The final two parts look at the applied nature of embodied cognition exploring the embodied nature of social co ordination as well

as the emerging field of artificial embodiment Building on the idea that knowledge acquisition retention and retrieval are intimately interconnected with sensory and motor processes Foundations of Embodied Cognition is a landmark publication in the field It will be of great interest to researchers and advanced students from across the cognitive sciences including those specialising in psychology neuroscience intelligent systems and robotics philosophy linguistics and anthropology

Rethinking Culture David White,2017-03-31 Organizational or corporate culture is the most overused and least understood word in business if not society While the topic has been an object of keen academic interest for nearly half a century theorists and practitioners still struggle with the most basic questions What is organizational culture Can it be measured Is it a dependent or independent variable Is it causal in organizational performance and if so how Paradoxically managers and practitioners ascribe cultural explanations for much of what constitutes organizational behavior in organizations and moreover believe culture can be engineered to their own designs for positive business outcomes What explains this divide between research and practice While much academic research on culture is challenged by ontological epistemic and ethical difficulties there is little empirical evidence to show culture can be deliberately shaped beyond espoused values The gap between research and practice can be explained by one simple reason the science and practice of culture has yet to catch up to managerial intuition Managers are correct in suspecting culture is a powerful normative force but until now current theory and research is not able to adequately account for cultural behavior in organizations **Rethinking Culture** describes and presents evidence for a new framework of organizational culture based on the cognitive science of the so called cultural mind It will be of relevance to academics and researchers with an interest in business and management organizational culture and organizational change as well as cognitive and cultural anthropologists and sociologists interested in applications of theory in organizational and institutional settings

Acta philologica ,2008 **Rights for Robots** Joshua C. Gellers,2020-10-26 Bringing a unique perspective to the burgeoning ethical and legal issues surrounding the presence of artificial intelligence in our daily lives the book uses theory and practice on animal rights and the rights of nature to assess the status of robots Through extensive philosophical and legal analyses the book explores how rights can be applied to nonhuman entities This task is completed by developing a framework useful for determining the kinds of personhood for which a nonhuman entity might be eligible and a critical environmental ethic that extends moral and legal consideration to nonhumans The framework and ethic are then applied to two hypothetical situations involving real world technology animal like robot companions and humanoid sex robots Additionally the book approaches the subject from multiple perspectives providing a comparative study of legal cases on animal rights and the rights of nature from around the world and insights from structured interviews with leading experts in the field of robotics Ending with a call to rethink the concept of rights in the Anthropocene suggestions for further research are made An essential read for scholars and students interested in robot animal and environmental law as well as those interested in technology more generally the book is a ground breaking study

of an increasingly relevant topic as robots become ubiquitous in modern society The Open Access version of this book available at <http://www.taylorfrancis.com/books/e/ISBN> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Cognition Yann Coello, Martin H. Fischer, 2016 **Rock Art Research**, 2007 **Intellectual Agency and Virtue**

Epistemology: A Montessori Perspective Patrick Frierson, 2019-12-12 Drawing on the work of Maria Montessori and contemporary virtue epistemologists such as Linda Zagzebski and Jason Baehr Intellectual Agency and Virtue Epistemology presents a new interpretation of the nature of intellectual agency and its associated virtues Focusing on Montessori's interpretation of specific virtues including sensory attentiveness intellectual love and intellectual humility it discusses why these are virtues why one can be held responsible for them and how they relate to each other Moreover it considers pedagogical implications of considering these capacities to be virtues Intellectual Agency and Virtue Epistemology not only reveals the value of seeing Montessori as a virtue epistemologist it encourages educationalists to take seriously the cultivation of intellectual virtues as an important part of the education of children

Emotion and

Consciousness Lisa Feldman Barrett, Paula M. Niedenthal, Piotr Winkielman, 2007-01-10 Presenting state of the art work on the conscious and unconscious processes involved in emotion this integrative volume brings together leading psychologists neuroscientists and philosophers Carefully organized tightly edited chapters address such compelling questions as how bodily responses contribute to conscious experience whether unconscious emotion exists how affect is transmitted from one

person to another and how emotional responses are produced in the brain Bringing a new level of coherence to lines of inquiry that often remain disparate the book identifies key cross cutting ideas and themes and sets forth a cogent agenda for future research

Explicit and Implicit Emotion Processing: Neural Basis, Perceptual and Cognitive Mechanisms Giulia Mattavelli,Alessia Celeghin,Noemi Mazzoni,2021-06-23 A

Graded-embodied Theory Account for the Processing of Emotional Stimuli Fernando Marmolejo-Ramos,2011 A series of experiments were devised to test the idea that sensorimotor systems activate during the processing of emotionally laden stimuli In Experiments 1 and 2 participants were asked to judged the pleasantness of emotionally laden sentences while participants held a pen in the mouth Experiments 3 and 4 were similar to the previous experiments but the experimental materials were emotionally laden images In Experiment 5 and 6 the same bodily manipulation used throughout the previous experiments was kept while participants judged facial expressions The first pair of experiments replicated findings suggesting that sensorimotor systems are activated during the processing of emotionally laden language However follow up experiments suggested that dual activation of both perceptual and motor systems is not always necessary For the particular case of emotionally laden stimuli the results suggested that the perceptual system seems to drive the processing It is also shown that a high resonance between sensorimotor properties afforded by the stimuli and the sensorimotor systems activated in the cognizer elicit emotional states The results invite to revise strong versions of embodiment accounts and rather support a graded embodiment view
