Sustainability Science Harald Heinrichs, Pim Martens, Gerd Michelsen, Arnim Wiek, 2015-11-26 This textbook provides a comprehensive compilation of conceptual perspectives, methodological approaches and empirical insights of inter and transdisciplinary sustainability science. Written by an international team of authors from leading sustainability institutions, the textbook covers key perspectives and topics of the scientific discourse on sustainable development. More than two decades after conceptualizing sustainability as societal guiding vision and regulative idea, the necessity of concretizing and realizing sustainability in societal praxis is bigger than ever. Sharply improved individual and societal sustainable decision making and action is necessary for a better future of humankind and the planet. On that account, problem and solution oriented perspectives and competencies are crucial. The different chapters assemble an encompassing view of essential foundations and specific areas of research and action in sustainability science and practice. The textbook aims at fostering the further establishment of sustainability science in higher education and to enable the next generation of sustainability experts to tackle the challenging and exciting topic of sustainable development. Sustainable Development in Science Policy-Making

Anna Schwachula, 2023-06-22 New knowledge created in international cooperation is essential for global sustainability. Set against this background, this study focuses on German science policy for research cooperation with developing countries and emerging economies in sustainability research. Based on interviews with policy makers and researchers, the book scrutinizes the actors, processes and contents of science policy in Germany. The author argues that science policy mainly aims at German economic benefits and technology development. This, however, negatively influences global sustainability. To counter existing path dependencies, the author provides recommendations for sustainability oriented scientific practice and science policy.

**Introduction to Sustainability: Humanity and the Environment** The Open The Open Courses Library,2020-01-07 Introduction to Sustainability Humanity and the Environment The Brundtland Report did not technically invent the term sustainability it was the first credible and widely disseminated study that probed its meaning in the context of the global impacts of humans on the environment Its main and often quoted definition refers to sustainable development as development that meets the needs of the present without compromising the ability of future generations to meet their own needs The report uses the terms sustainable development sustainable and sustainability interchangeably emphasizing the connections among social equity economic productivity and environmental quality The pathways for integration of these may differ nation by nation still these pathways must share certain common traits the essential needs of the world s poor to which overriding priority should be given and the idea of limitations imposed by the state of technology and social organization on the environment s ability to meet present and future needs Chapter Outline What is Sustainability The IPAT Equation Human Consumption Patterns and the Rebound Effect Challenges for Sustainability The Open Courses Library introduces you to the best Open Source Courses **Introduction to Sustainability** Nolberto Munier,2005-06-17 Sustainability relates with Economics Society and Environment However one common fact that links them all is the generation of waste This chapter is divided into two The first part analyses the current generation of waste as well as its treatment The second intends to establish policies for the future treatment of waste or better yet for ceasing the generation of waste This first part begins by raising some capital questions What is waste Which are the components of waste Where is waste generated and How is waste treated The second part will deal with Why is waste produced and What is society doing to correct this problem 2 2 First part

Current generation and treatment of waste 2 2 1 What is waste The dictionary defines waste as something useless unwanted or defective and the word by product as something produced in an industrial or biological process in addition to the principal product From the point of view of sustainability the word waste does not have that meaning as though it may be unwanted it is not something useless and is certainly not defective Even if in a manufacturing process a product or part of it does not conform to the manufacturer s quality specs it does not thereby become waste but is rather scrap material that is usually brought back to its original state and then processed again
