Step 2: Weigh the sample cup, wait for the weight to stabilize, then press **0/T** to return the weight to **0**.

Step 3: Put the sample into the cup gently, do not drop the sample out to affect the weighing result.

Step 4: Check the correct weight to be weighed (may be 0.09g error). Remove the cup containing the sample.

Step 5: Read the results and record them. Do the same from step 2 to step 5 for the next samples.

Mettler Toledo Manual:

Comprehensive Volume and Capacity Measurements S. V. Gupta, 2006 It is for the first time that a book of this magnitude covering the entire subject of volume and capacity measurements has hit the market. The strong point of the book is its more than 100 tables containing various corrections factors and conversions to compensate for various influence parameters. The most recent available data has been used in respect of density of water and mercury. Latest temperature scale namely ITS 90 has been used. All possible permutation and combinations of influence parameters like coefficient of expansion density of standard weights used and reference temperatures have been used in preparing corrections factors tables. The book contains 14 chapters. It is for the first time that concept of solid base primary standard of volume has been discussed. Various standards of volume and capacity starting from solid base primary standard down to field standards have been detailed. The chapters 1 and 2 also include realization hierarchy traceability periods of verification and maximum permissible errors of various standards. Precautions and recording of data using gravimetric volumetric methods have been described. Step by step methods of calibration of volumetric measures have been discussed. Volumetric glassware from one microlitre upward has been dealt with in detail. Design fabrication and calibration of standard capacity measuring from 10 millilitres to 5 000 litres have been discussed. Verification methods of high capacity storage tanks of various shapes and orientation including ships and barges of a few thousand cubic metres is one of the firsts of the book. Separate chapters on vehicle tanks carrying petroleum edible liquids and likes have been presented. Design and fabrication of large capacity measures to be used as standards have also been dealt with. The range of measurement covered is from one micro litre to several million litres.

Practical Laboratory Automation Matheus C. Carvalho, 2017-06-19 By closing the gap between general programming books and those on laboratory automation this timely book makes accessible to every laboratory technician or scientist what has traditionally been restricted to highly specialized professionals. Following the idea of learning by doing the book provides an introduction to scripting using AutoIt with many workable examples based on real world scenarios. A large portion of the book tackles the traditionally hard problem of instrument synchronization including remote web based synchronization. Automated result processing database operation and creation of graphical user interfaces are also examined. Readers of this book can immediately profit from the new knowledge in terms of both increased efficiency and reduced costs in laboratory operation. Above all laboratory technicians and scientists will learn that they are free to choose whatever equipment they desire when configuring an automated analytical setup regardless of manufacturers suggested specifications.

On the Time and Temperature Dependent Behaviour of Laminated Amorphous Polymers Subjected to Low-Velocity Impact Andreas Rühl, 2017-04-05 The thesis investigates a polymeric laminate consisting of poly methyl methacrylate PMMA and thermoplastic polyurethane TPU experimentally and numerically with regard to its impact behaviour and applicability. After a basic characterization of the monolithic materials PMMA TPU PMMA laminates were subjected to impact loadings at

velocities up to 5 m/s using three-point bending and dart impact tests. Based on the experimental basis different material models for the Finite Element simulation are presented which are able to capture the time and temperature dependent behaviour of the laminate. Final validation experiments consisting of head dummy impacts at 10 m/s on automotive side windows were conducted for PMMA and the laminate in order to investigate their applicability as glass substitution products.
