Zuidam, Viktor Nedovic, 2009-10-30 Consumers prefer food products that are tasty healthy and convenient. Encapsulation is an important way to meet these demands by delivering food ingredients at the right time and right place. For example encapsulates may allow flavor retention mask bad tasting or bad smelling components stabilize food ingredients and increase their bioavailability. Encapsulation may also be used to immobilize cells or enzymes in the production of food materials or products such as fermentation or metabolite production. This book provides a detailed overview of the encapsulation technologies available for use in food products food processing and food production. The book aims to inform those who work in academia or R D about both the delivery of food compounds via encapsulation and food processing using immobilized cells or enzymes. The structure of the book is according to the use of encapsulates for a specific application. Emphasis is placed on strategy since encapsulation technologies may change. Most chapters include application possibilities of the encapsulation technologies in specific food products or processes. The first part of the book reviews general technologies food grade materials and characterization methods for encapsulates. The second part discusses encapsulates of active ingredients e.g. aroma fish oil minerals vitamins peptides proteins probiotics for specific food applications. The last part describes immobilization technologies of cells and enzymes for

use within food fermentation processes e.g. beer, wine, dairy, meat and food production e.g. sugar conversion, production of organic acids or amino acids, hydrolysis of triglycerides. **Encapsulation and Controlled Release Technologies in Food Systems** Jamileh M. Lakkis, 2016-03-09. The emergence of the discipline of encapsulation and controlled release has had a great impact on the food and dietary supplements sectors, principally around fortifying food systems with nutrients and health-promoting ingredients. The successful incorporation of these actives in food formulations depends on preserving their stability and bioavailability as well as masking undesirable flavors throughout processing, shelf life, and consumption. This second edition of **Encapsulation and Controlled Release Technologies in Food Systems** serves as an improvement and a complement companion to the first. However, it differentiates itself in two main aspects. Firstly, it introduces the reader to novel encapsulation and controlled release technologies which have not yet been addressed by any existing book on this matter, and secondly, it offers an in-depth discussion on the impact of encapsulation and controlled release technologies on the bioavailability of health ingredients and other actives. In common with the first edition, the book includes chapters written by distinguished authors and researchers in their respective areas of specialization. This book is designed as a reference for scientists and formulators in the food, nutraceuticals, and consumer products industries who are looking to formulate new or existing products using microencapsulated ingredients. It is also a post-graduate text designed to provide students with an introduction to encapsulation and controlled release, along with detailed coverage of various encapsulation technologies and their adaptability to specific applications.
