Zaborsky, 2007-08-30 The world needs clean and renewable energy and hydrogen represents an almost ideal resource Hydrogen is the simplest and most abundant molecule in the universe yet one that is a challenge to produce from renewable resources Biohydrogen or hydrogen produced from renewable resources such as water or organic wastes by biological means is a goal worthy of increased global attention and resources The purpose of BioHydrogen 97 was to bring together leaders in the biological production of hydrogen from the United States Japan Europe and elsewhere to exchange scientific and technical information and catalyze further cooperative programs Participants came from at least different countries representing academia industry and government Especially important participants were young research scientists and engineers the next generation of contributors The conference consisted of plenary presentations topical sessions posters and mini workshop discussions on key areas of biohydrogen It was designed to maximize information exchange personal interaction among participants and formulate new international initiatives BioHydrogen 97 was an outgrowth of an international workshop convened by the Research Institute of Innovative Technology for the Earth RITE and was held in Tokyo Japan November 24-25 1994 The RITE workshop was highly successful but largely limited to traditional biochemical and biological studies and not engineering research topics **Cytogenetic Analysis for Radiation Dose Assessment** International Atomic Energy Agency, 2001 This manual is a revision of Technical Reports Series No 260 Biological Dosimetry Chromosomal Aberration Analysis for Dose Assessment 1986 It provides the latest information on standardized conventional methods used for the cytogenetic assessment of doses incurred through ionizing radiation scoring dicentric chromosomes and on newly available proven techniques such as fluorescence in situ hybridization premature chromosomal condensation and micronucleus assays Algae and their Biotechnological Potential Feng Chen, Yue Jiang, 2013-03-09 Algae are important organisms that include seaweeds and a number of single celled and multicellular microscopic forms Algae are ubiquitous they inhabit almost everywhere including oceans freshwater bodies rocks soils and trees Man's uses of algae may date back to ancient times In recent decades there has been renewed interest in the utilization of algae as sources of health food and high value chemicals and pharmaceuticals and for aquaculture agriculture and wastewater treatment Nevertheless the biotechnological potential of algae is still far from fully exploited due to a lack of understanding of algal characteristics and culture systems as well as of advanced research techniques This book contains selected papers presented at the Fourth Asia Pacific Conference on Algal Biotechnology held in Hong Kong on 3-6 July 2000 Written by experts in the field this book provides a state of the art account of algal biotechnology research Topics range from use of algae in agriculture to environmental monitoring and protection from algal culture systems to production of high value chemicals and pharmaceuticals by algae and from algal product purification to gene transformation and regulations This book is intended for use by researchers and industrialists in the field of algal biotechnology It will also be an important reference for undergraduate and postgraduate students in biotechnology and food science as well as in biology in general
