Nutraceuticals in Cardiovascular Diseases and their Associated Risk Conditions Naufal Zagidullin,Lamiaa A. Ahmed,Fan Yang,2024-09-19 Cardiovascular diseases and their associated risk conditions including

dyslipidemia hypertension and diabetes are one of the main health issues worldwide The mechanisms underlying cardiovascular disorders are complex and multifactorial including oxidative stress inflammation and mitochondrial dysfunction as well as modulating the activities of several kinases and phosphatases Importantly pharmacotherapies available for the management of these diseases are considered insufficient and show several limitations and side effects especially in high risk patients Nutraceuticals are bioactive food components or phytochemicals that provide benefits including the prevention or treatment of several diseases Nutraceuticals such as flavonoids vitamins and other natural substances have shown pleiotropic antioxidant and anti inflammatory properties

Plant-microbes Interactions and Resistance Against Abiotic Stress Marzena Sujkowska-Rybkowska, Anna Rusaczek, 2025-04-30 Abiotic stresses such as cold heat drought salinity and heavy metals limit plant growth Plants interact with a wide range of different soil microorganisms including prokaryotes fungi and viruses These microorganisms can modulate various elements of plant defense mechanisms in response to abiotic stress Symbiotic microbes can either enhance or hinder plant nutrient uptake and use efficiency thereby impacting their growth and yield under stress Plant associated microbes also have the ability to alleviate stress through the activation of physiological biochemical and molecular pathways that coordinate ion uptake nutrient metabolism and the synthesis of compounds with osmotic or antioxidant activity A comprehensive understanding of the mechanisms underlying the interactions between plants and their symbiotic microbes can potentially improve plant resistance to abiotic stress
