viewpoint much higher lead counts with shorter wire and interconnection lengths can be accommodated. This is critical in high performance modern electronics packaging. From the manufacturing viewpoint the application of automated assembly and robotics is much more adaptable to high lead count surface mounted devices and components. Indeed the insertion of high lead count parts into fine holes on a substrate might often be nearly impossible. Yet in spite of these surface mounting advantages the utilization of surface mount technology is often a problem primarily due to soldering problems. The most practical soldering methods use solder pastes whose intricacies are frequently not understood by most of those involved in the engineering and manufacture of electronics assemblies. This publication is the first book devoted exclusively to explanations of the broad combination of the chemical metallurgical and rheological principles that are critical to the successful use of solder pastes. The critical relationships between these characteristics are clearly explained and presented. In this excellent presentation Dr Hwang highlights three important areas of solder paste technology.
