Reactive Flows, Diffusion and Transport Willi Jäger, Rolf Rannacher, J. Warnatz, 2007-05-31 The articles in this volume summarize the research results obtained in the former SFB 359 Reactive Flow Diffusion and Transport which has been supported by the DFG over the period 1993-2004. The main subjects are physical chemical processes sharing the difficulty of interacting diffusion transport and reaction which cannot be considered separately. Typical examples are the chemical processes in flow reactors and in the catalytic combustion at surfaces. Further examples are models of star formation including diffusive mass transport energy radiation and dust formation and the polluting transport in soil and waters. For these complex processes mathematical models are established and numerically simulated. The modeling uses multiscale techniques for nonlinear differential equations while for the numerical simulation and optimization goal oriented mesh and model adaptivity multigrid techniques and advanced Newton type methods are developed combined with parallelization. This modeling and simulation is accompanied by experiments. *43rd AIAA Aerospace Sciences Meeting & Exhibit*, 2005

Stability of Axially Moving Materials Nikolay Banichuk, Alexander Barsuk, Juha Jeronen, Tero Tuovinen, Pekka Neittaanmäki, 2019-09-05 This book discusses the stability of axially moving materials which are encountered in process industry applications such as papermaking. A special emphasis is given to analytical and semianalytical approaches. As preliminaries we consider a variety of problems across mechanics involving bifurcations allowing to introduce the techniques in a simplified setting. In the main part of the book the fundamentals of the theory of axially moving materials are presented in a systematic manner including both elastic and viscoelastic material models and the connection between the beam and panel models. The issues that arise in formulating boundary conditions specifically for axially moving materials are discussed. Some problems involving axially moving isotropic and orthotropic elastic plates are analyzed. Analytical free vibration solutions for axially moving strings with and without damping are derived. A simple model for fluid structure interaction of an axially moving panel is presented in detail. This book is addressed to researchers, industrial specialists and students in the fields of theoretical and applied mechanics and of applied and computational mathematics. **Mathematical Reviews**, 2005
