

# Population-based survey mortality data

- The Demographic and Health Surveys (DHS) (<http://www.measuredhs.com/aboutdhs/>) collect detailed birth histories collected from women in national surveys. South Africa has had two DHSs: SADHS 1998, 2003
- The DHS also collect sibling mortality data from the sampled women, usually in the age range 15-49 years
- The Community Survey conducted in 2007 by Statistics South Africa collected birth history data from women and deaths in the sampled households
- These sources can be used for estimation infant, children and adult mortality, with differing reliability, generalization and limitations

## **Online Mortality Estimation National Populations Applications:**

Population Dynamics and Projection Methods John Stillwell, Martin Clarke, 2011-02-15 Although the human population growth rate of the world has been declining since peaking in the early 1960s the populations of individual countries are changing at different rates Population dynamics at national level are partly determined by levels of fertility and mortality but the impact of international migration is playing an increasingly important role Moreover internal migration plays a major part in population change at the sub national level This fourth volume in the series Understanding Population Trends and Processes is a celebration of the work of Professor Philip Rees It contains chapters by contributors who have collaborated with Phil Rees on research or consultancy projects or as postgraduate students Several chapters demonstrate the technical nature of population projection modelling and simulation methods while others illustrate issues relating to data availability and estimation This book demonstrates the application of theoretical and modelling methods and addresses key issues relating to contemporary demographic patterns and trends

**World Health Statistics 2018** World Health Organization, 2018-06-28 The World Health Statistics series is WHO's annual compilation of health statistics for its 194 member states World health statistics 2018 focuses on the health and health related Sustainable Development Goals (SDGs) and associated targets by bringing together data on a wide range of health related SDG indicators It also links to the three SDG aligned strategic priorities of the WHO's 13th General Programme of Work 2019-2023 World health statistics 2018 is organised into three parts First in order to improve understanding and interpretation of the data presented Part 1 outlines the different types of data used and provides an overview of their compilation processing and analysis The resulting statistics are then publicised by WHO through its flagship products such as the World Health Statistics series In Part 2 summaries are provided of the current status of selected health related SDG indicators at global and regional levels based on data available as of early 2018 In Part 3 each of these three strategic priorities of achieving universal health coverage (UHC) addressing health emergencies and promoting healthier populations are illustrated through the use of highlight stories In Annexes A and B country level statistics are presented for selected health related SDG indicators Annex B presents statistics at WHO regional and global levels

**World health statistics 2023** World Health Organization, 2023-05-19 The World health statistics report is the World Health Organization's WHO latest annual compilation of health and health related indicators for its 194 Member States The 2023 edition consolidates data for 50 health and health related indicators SDGs and GPW13

*World health statistics 2020* World Health Organization, 2020-05-13 The World health statistics 2020 report is the annual compilation of health statistics for 194 Member States It summarizes trends in life expectancy and causes of death and reports on progress towards the health and health related Sustainable Development Goals (SDGs) and associated targets

**World health statistics 2021**, 2021-07-13 Application of Bioinformatics in Cancers Chad Brenner, 2019-11-20 This collection of 25 research papers comprised of 22 original articles and 3 reviews is brought together from international

leaders in bioinformatics and biostatistics The collection highlights recent computational advances that improve the ability to analyze highly complex data sets to identify factors critical to cancer biology Novel deep learning algorithms represent an emerging and highly valuable approach for collecting characterizing and predicting clinical outcomes data The collection highlights several of these approaches that are likely to become the foundation of research and clinical practice in the future In fact many of these technologies reveal new insights about basic cancer mechanisms by integrating data sets and structures that were previously immiscible Accordingly the series presented here bring forward a wide range of artificial intelligence approaches and statistical methods that can be applied to imaging and genomics data sets to identify previously unrecognized features that are critical for cancer Our hope is that these articles will serve as a foundation for future research as the field of cancer biology transitions to integrating electronic health record imaging genomics and other complex datasets in order to develop new strategies that improve the overall health of individual patients **Current Index to**
