However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis   **Stream Computing on Graphics Hardware** Ian Buck,2005   *Bioinformatics* Bertil Schmidt,2011 A compilation of recent approaches from prominent researchers this referencediscusses how to take advantage of bioinformatics applications and algorithmson a variety of modern parallel architectures   Graphics Hardware 2007 Mark Segal,Timo Aila,2007-08-17 Graphics Hardware is a highly visible established international forum for exchanging experience and knowledge related to computer graphics hardware The event held annually since 1986 offers a unique perspective on graphics hardware by combining discussions and constructive criticism of innovative concepts as well as product level designs It is an inclusive forum for the entire graphics hardware community and brings together researchers engineers and architects This book contains the papers presented at Graphics Hardware 2007 which took place in San Diego California August 4 5 2007   **Euro-Par 2017: Parallel Processing Workshops** Dora B.
