Nanomaterials Processing And Characterization With Lasers:

Nanomaterials S. C. Singh, H.B. Zeng, Chunlei Guo, Weiping Cai, 2012-10-22 The first in depth treatment of the synthesis processing and characterization of nanomaterials using lasers ranging from fundamentals to the latest research results this handy reference is divided into two main sections After introducing the concepts of lasers nanomaterials nanoarchitectures and laser material interactions in the first three chapters the book goes on to discuss the synthesis of various nanomaterials in vacuum gas and liquids The second half discusses various nanomaterial characterization techniques involving lasers from Raman and photoluminescence spectroscopies to light dynamic scattering laser spectroscopy and such unusual techniques as laser photo acoustic fluorescence correlation spectroscopy ultrafast dynamics and laser induced thermal pulses The specialist authors adopt a practical approach throughout with an emphasis on experiments set up and results Each chapter begins with an introduction and is uniform in covering the basic approaches experimental setups and dependencies of the particular method on different parameters providing sufficient theory and modeling to understand the principles behind the techniques **Nanomaterials**, 2014 **Laser-based Techniques for Nanomaterials** Nandakumar Kalarikkal, Rodolphe Antoine, Sabu Thomas, Padiyakkuth Nideesh, 2024-12-13 Laser technologies offer multiple benefits in the synthesis and characterisation of nanomaterials In synthesis the higher selectivity and shorter processing times of laser based techniques can help you to save time and minimise waste compared to conventional fabrication processes Characterisation with lasers allows you to study nonlinear optical effects which provide better molecular selectivity and reduced background signals Beginning with chapters introducing the principles of lasers and non linear optics this book will guide you through using laser based techniques for the synthesis and characterisation of nanomaterials Laser sintering and melting are included as well as approaches to 3D printing by using multiphoton lithography Various characterisation techniques are described including multiscale and ultrafast dynamics and LIBS Both experienced practitioners and those aspiring to use lasers in their work will find this book a useful and inspiring guide Optical Properties of Metal Oxide Nanostructures Vijay Kumar, Irfan Ayoub, Vishal Sharma, Hendrik C. Swart, 2023-09-23 This book highlights the optical properties of metal oxides at both the fundamental and applied level and their use in various applications The book offers a basic understanding of the optical properties and related spectroscopic techniques essential for anyone interested in learning about metal oxide nanostructures This is partly due to the fact that optical properties are closely associated with other properties and functionalities e.g. electronic magnetic and thermal which are of essential significance to many technological applications such as optical data communications imaging lighting and displays life sciences health care security and safety The book also highlights the fundamentals and systematic developments in various optical techniques to achieve better characterization cost effective user friendly approaches and most importantly state of the art developing methodologies for various scientific and technological applications It provides an adequate understanding of the imposed limitations and highlights the prospects and

challenges associated with optical analytical methods to achieve the desired performance in targeted applications
