The Inversion Factor Linda Bernardi, Sanjay E. Sarma, Kenneth Traub, 2018-09-11 Why companies need to move away from a product first orientation to pursuing innovation based on customer need In the past companies found success with a product first orientation they made a thing that did a thing The Inversion Factor explains why the companies of today and tomorrow will have to abandon the product first orientation Rather than asking How do the products we make meet customer needs companies should ask How can technology help us reimagine and fill a need Zipcar for example instead of developing another vehicle for moving people from point A to point B reimaged how people interacted with vehicles Zipcar inverted the traditional car company mission The authors explain how the introduction of smart objects connected by the Internet of Things signals fundamental changes for business The IoT where real and digital coexist is powering new ways to meet human needs Companies that know this include giants like Amazon Airbnb Uber Google Tesla and Apple as well as less famous companies like Tile Visenti and Augury The Inversion Factor offers a roadmap for businesses that want to follow in their footsteps The authors chart the evolution of three IoTs the Internet of Things devices connected to the Internet the Intelligence of Things devices that host software applications and the Innovation of Things devices that become experiences Finally they offer a blueprint for businesses making the transition to inversion and interviews with leaders of major companies and game changing startups *Integration of Energy, Information, Transportation and Humanity* C.C.

countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport related carbon dioxide CO₂ and air pollutant emissions. However, battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs) have been more expensive than their conventional counterparts and suffer from relatively short electric driving ranges which still hampers the market potential of these vehicles. Despite persisting shortfalls, mechanisms such as technological learning and economies of scale promise to improve the techno-economic performance of BEVs and PHEVs in the short to mid term. Here, the author seeks to obtain insight into the techno-economic prospects of BEVs and PHEVs by i) establishing experience curves and ii) quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time series analysis. The analysis captures the situation in Germany between 2010 and 2016.

Electric and Hybrid Vehicles Iqbal Husain, 2021-02-22. A thoroughly revised third edition of this widely praised bestselling textbook presents a comprehensive systems-level perspective of electric and hybrid vehicles with emphasis on technical aspects, mathematical relationships, and basic design guidelines. The emerging technologies of electric vehicles require the dedication of current and future engineers, so the target audience for the book is the young professionals and students in engineering eager to learn about the area. The book is concise and clear; its mathematics are kept to a necessary minimum, and it contains a well-balanced set of contents of the complex technology. Engineers of multiple disciplines can either get a broader overview or explore in depth a particular aspect of electric or hybrid vehicles. Additions in the third edition include simulation-based design analysis of electric and hybrid vehicles and their powertrain components, particularly that of traction inverters, electric machines, and motor drives. The technology trends to incorporate wide bandgap power electronics and reduced rare earth permanent magnet electric machines in the powertrain components have been highlighted. Charging stations are a critical component for the electric vehicle infrastructure, and hence a chapter on vehicle interactions with the power grid has been added. Autonomous driving is another emerging technology, and a chapter is included describing the autonomous driving system architecture and the hardware and software needs for such systems. The platform has been set in this book for system-level simulations to develop models using various softwares used in academia and industry such as MATLAB Simulink, PLECS, PSIM, Motor CAD, and Altair Flux. Examples and simulation results are provided in this edition using these software tools. The third edition is a timely revision and contribution to the field of electric vehicles that has reached recently notable markets in a more and more environmentally sensitive world.
