N. Mahalle,Pathan Mohd Shafi,Vinod V. Kimabahune,Aboul Ella Hassanien,2020-02-14 This book addresses a broad range of topics concerning machine learning big data the Internet of things IoT and security in the IoT Its goal is to bring together several innovative studies on these areas in order to help researchers engineers and designers in

several interdisciplinary domains pursue related applications. It presents an overview of the various algorithms used focusing on the advantages and disadvantages of each in the fields of machine learning and big data. It also covers next generation computing paradigms that are expected to support wireless networking with high data transfer rates and autonomous decision making capabilities. In turn, the book discusses IoT applications e.g. healthcare applications that generate a huge amount of sensor data and imaging data that must be handled correctly for further processing. In the traditional IoT ecosystem, cloud computing offers a solution for the efficient management of huge amounts of data thanks to its ability to access shared resources and provide a common infrastructure in a ubiquitous manner. Though these new technologies are invaluable, they also reveal serious IoT security challenges. IoT applications are vulnerable to various types of attack such as eavesdropping, spoofing, and false data injection, the man in the middle attack, replay attack, denial of service attack, jamming attack, flooding attack, etc. These and other security issues in the Internet of things are explored in detail. In addition to highlighting outstanding research and recent advances from around the globe, the book reports on current challenges and future directions in the IoT. Accordingly, it offers engineers, professionals, researchers, and designers an applied oriented resource to support them in a broad range of interdisciplinary areas.
