

A detailed illustration of a partridge in a field of flowers. The partridge is the central focus, shown from the side and slightly from behind, facing right. It has a mottled brown and tan plumage on its body and wings, with a distinct white patch on its wing. Its head is a light tan color with a dark brown stripe through its eye. To the right of the partridge, a smaller bird, possibly a chick, is visible. The background is a lush green field filled with various flowers, including white daisies, yellow buttercups, and red poppies.

The Changing Status of Arable Habitats in Europe Clive Hurford, Phil Wilson, Jonathan Storkey, 2021-01-29 This edited volume documents the current nature conservation status of arable habitats in Europe Arable farming systems have evolved in the European landscape over more than ten thousand years and now occupy nearly 30% of the European land area They support species that have life cycles closely synchronised with traditional cereal growing many of which have experienced massive declines throughout Europe For example in Britain of the 100 plant species exhibiting the greatest declines in the latter half of the 20th century 47 were typical of arable land Despite this the habitat and many of the species associated with it remains unprotected across much of Europe The 22 chapters cover a range of topics including Regional accounts describing the impact of changing agricultural practices on the arable flora The results of research and surveillance projects on the soil organisms bryophyte flora invertebrate fauna and pollinators of arable habitats The potential for designing multifunctional and resilient agricultural landscapes The use of ex situ conservation to aid the reintroduction of rare arable plants Case studies illustrating how changing agricultural practices have impacted on bird populations in Europe The roles of remote sensing in monitoring agricultural systems How agri environment schemes can help restore the biodiversity in arable habitats and A look forward at ways to help ensure the future security of the species associated with arable habitats It is clear that the biodiversity of arable land throughout Europe has undergone major changes particularly during the second half of the 20th century and that these changes are continuing into the 21st century We need to develop a deeper appreciation of farmland wildlife and its integration into farming systems to ensure its future security in a world where value is increasingly expressed in terms of material profit This book is particularly relevant to practitioners policy makers and managers working in the fields of nature conservation agri environment schemes and land management and to researchers working in the fields of conservation biology terrestrial ecology nature conservation applied ecology biodiversity agriculture agricultural ethics and environmental studies **Partridges** G. R. Potts, 2012 Globally there are at least 45 species of game bird that have the word partridge in their name but in this book G R Potts devotes himself to the Grey Red legged and Chukar Partridges with particular emphasis on the Grey Partridge due to its well known decline in Britain In this groundbreaking addition to the New Naturalist series Potts explores how mankind and partridges have evolved together both

ultimately dependent on grasslands rather than forests For thousands of years both ate grass seeds and this continued until cereals largely replaced them Hundreds of species of plant and insect that partridges and other birds eat thrived on farms for thousands of years until the dawn of the pesticides era Since then the long decline in partridge abundance has been a barometer for biodiversity over vast swathes of the Northern Hemisphere Highlighting the positive example of the Norfolk Estate in the Sussex Study area Potts investigates how both Grey and Red legged Partridge numbers have been increased flourishing in a highly productive and profitable system of farming and an oasis in what has often looked and sounded like a desert In a small corner of England farmland wildlife is able to thrive much as it did before pesticides were introduced This is a complex and fascinating story with a heady mix of hunting farming predation parasites disease and climate change The way these factors have interacted tells us a lot about how lesser known species have fared and how they can be conserved for the future Potts stresses the importance of these conservation efforts as farmers respond to the needs of an extra three billion people worldwide not just for food but for bio fuels Additionally the pressures on farmland wildlife will further intensify in the coming years

A Less Green and Pleasant Land Norman Maclean,2015-04-16 Disentangling the facts from the hype this Domesday book of the British and Irish countryside offers a definitive and up to date survey of the state of our wildlife today Norman Maclean editor of the bestselling Silent Summer examines the latest findings of Britain and Ireland's top wildlife experts and interprets them for a wider audience Each chapter provides reliable estimates of animal populations showing which species are thriving and which are in decline The book also considers the effects of climate change on our wildlife and how human population growth is influencing its development Beautifully illustrated with colour plates and wood engravings throughout this accessible and timely study reveals just how rapidly our countryside and its wildlife are changing why we should be concerned and what we can do about it
