## **Pattern Recognition With Fuzzy Objective Function Algorithms Advanced Applications In Pattern Recognition:**

Pattern Recognition with Fuzzy Objective Function Algorithms James C. Bezdek, 2013-03-13 The fuzzy set was conceived as a result of an attempt to come to grips with the problem of pattern recognition in the context of imprecisely defined categories In such cases the belonging of an object to a class is a matter of degree as is the question of whether or not a group of objects form a cluster A pioneering application of the theory of fuzzy sets to cluster analysis was made in 1969 by Ruspini It was not until 1973 however when the appearance of the work by Dunn and Bezdek on the Fuzzy ISODATA or fuzzy c means algorithms became a landmark in the theory of cluster analysis that the relevance of the theory of fuzzy sets to cluster analysis and pattern recognition became clearly established Since then the theory of fuzzy clustering has developed rapidly and fruitfully with the author of the present monograph contributing a major share of what we know today In their seminal work Bezdek and Dunn have introduced the basic idea of determining the fuzzy clusters by minimizing an appropriately defined functional and have derived iterative algorithms for computing the membership functions for the clusters in question The important issue of convergence of such algorithms has become much better understood as a result of recent work which is described in the monograph
