Pattern Recognition A Statistical Approach:

Pattern Recognition Pierre A. Devijver,Josef Kittler,1982 **Pattern Recognition** Robert J. Schalkoff,1992 Explores the heart of pattern recognition concepts methods and applications using statistical syntactic and neural approaches Divided into four sections it clearly demonstrates the similarities and differences among the three approaches The second part deals with the statistical pattern recognition approach starting with a simple example and finishing with unsupervised learning through clustering Section three discusses the syntactic approach and explores such topics as the capabilities of string grammars and parsing higher dimensional representations and graphical approaches Part four presents an excellent overview of the emerging neural approach including an examination of pattern associations and feedforward nets Along with examples each chapter provides the reader with pertinent literature for a more in depth study of specific topics A Statistical Approach to Neural Networks for Pattern Recognition Robert A. Dunne,2007-07-30 An accessible and up to date treatment featuring the connection between neural networks and statistics A Statistical Approach to Neural Networks for Pattern Recognition presents a statistical treatment of the Multilayer Perceptron MLP which is the most widely used of the neural network models This book aims to answer questions that arise when statisticians are first confronted with this type of model such as How robust is the model to outliers Could the model be made more robust Which points will have a high leverage What are good starting values for the fitting algorithm Thorough answers to these questions and many more are included as well as worked examples and selected problems for the reader Discussions on the use of MLP models with spatial and spectral data are also included Further treatment of highly important principal aspects of the MLP are provided such as the robustness of the model in the event of outlying or atypical data the influence and sensitivity curves of the MLP why the MLP is a fairly robust model and modifications to make the MLP more robust The author also provides clarification of several misconceptions that are prevalent in existing neural network literature Throughout the book the MLP model is extended in several directions to show that a statistical modeling approach can make valuable contributions and further exploration for fitting MLP models is made possible via the R and S PLUS codes that are available on the book s related Web site A Statistical Approach to Neural Networks for Pattern Recognition successfully connects logistic regression and linear discriminant analysis thus making it a critical reference and self study guide for students and professionals alike in the fields of mathematics statistics computer science and electrical engineering Syntactic and Structural Pattern Recognition Horst Bunke,Alberto Sanfeliu,1990 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped

into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book

Robustness in Statistical Pattern Recognition Y. Kharin,2012-12-22 This book is concerned with important problems of robust stable statistical pat tern recognition when hypothetical model assumptions about experimental data are violated disturbed Pattern recognition theory is the field of applied mathematics in which prin ciples and methods are constructed for classification and identification of objects phenomena processes situations and signals i e of objects that can be specified by a finite set of features or properties characterizing the objects Mathematical Encyclopedia 1984 Two stages in development of the mathematical theory of pattern recognition may be observed At the first stage until the middle of the 1970s pattern recogni tion theory was replenished mainly from adjacent mathematical disciplines mathe matical statistics functional analysis discrete mathematics and information theory This development stage is characterized by successful solution of pattern recognition problems of different physical nature but of the simplest form in the sense of used mathematical models One of the main approaches to solve pattern recognition problems is the statisti cal approach which uses stochastic models of feature variables Under the statistical approach the first stage of pattern recognition theory development is characterized by the assumption that the probability data model is known exactly or it is esti mated from a representative sample of large size with negligible estimation errors Das Gupta 1973 1977 Rey 1978 Vasiljev 1983 **Statistical Pattern Recognition** Andrew R. Webb,Andrew Webb,1999 This book provides an introduction to statistical pattern recognition theory and techniques Most of the material presented in this book is concerned with discrimination and classification and has been drawn from a wide range of literature including that of engineering statistics computer science and the social sciences This book is an attempt to provide a concise volume containing descriptions of many of the most useful of today s pattern processing techniques including many of the recent advances in nonparametric approaches to discrimination developed in the statistics literature and elsewhere The techniques are illustrated with examples of real world applications studies Pointers are also provided to the diverse literature base where further details on applications comparative studies and theoretical developments may be obtained Page xv *Statistical Approach to the Problem of Learning Pattern Recognition* V. A. Kovalevskii,FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OHIO.,1970 The paper shows that the problem of learning to recognize patterns is susceptible of statistical formulation and may be viewed as a particular case of the general problem of statistical solutions Learning in this case may be accomplished by two methods one of which is applicable when it

is possible to measure directly the risk function characterizing the performance of the machine being taught learning by reinforcement The second method called learning by patterns is used when the risk function cannot be measured Exact solution of this problem consists in finding the a posteriori distribution of unknown parameters and subsequent averaging of distributions containing these parameters with the above mentioned distribution serving as a weight An evaluation is made of the minimum learning time showing that in the absence of any substantial limitations superimposed on the probability distribution or on the determinant rules the learning process must involve nearly all input signals In the case of multidimensional input signals learning time in the absence of limitations proves to be inadmissibly long *Structural, Syntactic, and Statistical Pattern Recognition* Dit-Yan Yeung,2006-08-03 This is the proceedings of the 11th International Workshop on Structural and Syntactic Pattern Recognition SSPR 2006 and the 6th International Workshop on Statistical Techniques in Pattern Recognition SPR 2006 held in Hong Kong August 2006 alongside the Conference on Pattern Recognition ICPR 2006 38 revised full papers and 61 revised poster papers are included together with 4 invited papers covering image analysis character recognition bayesian networks graph based methods and more Statistical approach to pattern recognition Pavel Pudil,Jana Novovičová,Svatopluk Bláha,1991 **A Statistical Approach to Neural Networks for Pattern Recognition** Robert A. Dunne,2007-07-16 This book presents a statistical treatment of the Multilayer Perceptron MLP which is the most widely used of the neural network models in a language that is familiar to practicing statisticians Questions arise when statisticians are first confronted with such a model and this book s aim is to provide thorough answers **Structural, Syntactic, and Statistical Pattern Recognition** Georgy Gimel′farb,Edwin Hancock,Atsushi Imiya,Arjan Kuijper,Mineichi Kudo,Shinichiro Omachi,Terry Windeatt,Keiji Yamada,2012-10-22 This volume constitutes the refereed proceedings of the Joint IAPR International Workshops on Structural and Syntactic Pattern Recognition SSPR 2012 and Statistical Techniques in Pattern Recognition SPR 2012 held in Hiroshima Japan in November 2012 as a satellite event of the 21st International Conference on Pattern Recognition ICPR 2012 The 80 revised full papers presented together with 1 invited paper and the Pierre Devijver award lecture were carefully reviewed and selected from more than 120 initial submissions The papers are organized in topical sections on structural syntactical and statistical pattern recognition graph and tree methods randomized methods and image analysis kernel methods in structural and syntactical pattern recognition applications of structural and syntactical pattern recognition clustering learning kernel methods in statistical pattern recognition kernel methods in statistical pattern recognition as well as applications of structural syntactical and statistical methods Pattern Recognition: From Classical To Modern Approaches Sankar Kumar Pal,Amita Pal,2001-11-23 This volume containing contributions by experts from all over the world is a collection of 21 articles which present review and research material describing the evolution and recent developments of various pattern recognition methodologies ranging from statistical syntactic linguistic fuzzy set theoretic neural genetic algorithmic and rough set
