**Indo-U.S. Workshop on Challenges of Emerging Infections and Global Health Safety** Indian National Science Academy, National Academy of Sciences, Policy and Global Affairs, Committee on India-United States Cooperation on Challenges of Emerging Infections and Global Health Safety, 2016-06-13 The United States and India have pledged to deepen the linkages between their people their businesses and their governments for the mutual benefit of both countries and for the promotion of global peace stability economic growth and prosperity Both nations are now inclined to improve relations and cooperation but the nations need specific actions that will yield progress and build confidence and momentum for further cooperation The Indo U S Workshop on Challenges of Emerging Infections and Global Health Safety held in November 2014 encouraged scientists from both countries to examine global issues related to emerging and existing infections and global health safety to share experience and approaches and to identify opportunities for cooperation to improve practice and research in these areas This report summarizes the presentations and discussions from the workshop

**Influenza Virus Vaccines and Immunotherapies** Arun Kumar, Shakti Singh, 2016-03-15 Influenza virus infections lead to thousands of deaths worldwide annually and billions of dollars economic burden Despite continuing advances in our understanding of the immune evasion mechanism the disease remains one of the foremost threat for human being Traditional vaccines attenuated and inactivated mainly provide protection by inducing virus neutralizing antibodies targeting ever changing surface antigens Haemagultinin HA and Neuraminidase NA Due to genetic shift and immune selection pressure prevalence of circulating influenza virus subtypes changes every year Therefore mismatch between circulating strain and vaccine strain can critically affect the success rate of these conventional flu vaccines and requires continuous monitoring of circulating influenza virus subtypes and change in the vaccine formulations accordingly The collective limitations of existing flu vaccines urgently call for the development of a novel universal vaccines that might provide the required protective immunity to a range of influenza virus subtypes New approaches are being investigated mainly targeting conserved regions of flu proteins Some of these approaches include universally conserved epitopes of HA nucleoprotein NP capsid protein M1 and ion channel protein M2 that induced strong immune responses in animal models Some attention and progress appears to be focused on vaccines based on the M2 ectodomain M2e employing a variety of constructs adjuvants and delivery systems including M2e hepatitis B core antigen flagellin constructs and virus like particles VLP Animal studies with these M2e candidate vaccines demonstrated that these vaccine candidates can prevent severe illness and death but not infection which may pose difficulties in both the evaluation of clinical efficacy and approval by the regulatory authorities VLP vaccines appear to be promising but still are mostly limited to animal studies The discovery and development of new and improved vaccines have been greatly facilitated by the application of new technologies The use of nucleic acid based vaccines to combine the benefits of in situ expression of antigens with the safety of inactivated and subunit vaccines has been a key advancement Upon their discovery more than 20

years ago nucleic acid vaccines promised to be a safe and effective mean to mimic immunization with a live organism vaccine particularly for induction of T cell immunity In addition the manufacturing of nucleic acid based vaccines offered the potential to be relatively simple inexpensive and generic Reverse Vaccinology and in silico designing of vaccines are very innovative approaches and being considered as future of vaccines Furthermore various immuno therapeutic agents also being developed to treat and minimize immuno pathological damage in patients suffering from life threatening complications For the treatment of such pathological conditions various novel approaches such as administration of immune suppressive cytokines blocking co stimulatory signals or activating co inhibitory signal of T cell activation are being tested both in lab and clinics The Research Topic on influenza virus vaccine and therapeutics will give an insight in to the current status and future scope of these new innovative approaches and technologies Moreover these new methods will also serve as a reference tool for the development of future vaccines against several other pathogens

,1949 **Projects in Scientific Computing** Pittsburgh Supercomputing Center,1992 **Viral Pathogenesis and Immunity** Neal Nathanson,2007-04-04 Based on the highly successful reference work *Viral Pathogenesis* published in 1997 this concise economical version can be used both as an introductory text or for self education by medical students and biologists alike This latest edition provides a completely revised overview of the subject with new chapters on innate immunity emerging viral diseases and antiviral therapy in a format that is easy to understand without continually referring to additional information Used by the author in his graduate classes at the University of Pennsylvania it sets forth the essential principles and discusses the details of how the immune system responds to viral invasion including the treatment and prevention of infection Illustrated by pertinent examples it is one of the only books devoted exclusively to this topic Offers almost a 20% expansion over the first edition Focuses specifically on viral pathogenesis unlike other texts where only a few chapters are devoted to the topic Neal Nathanson is one of the primary authorities in the field and has authored chapters on viral pathogenesis in two of the most well known virology and microbiology titles *Field s Virology* and *Topley and Wilson s Microbiology Now* in four color throughout Scientific American ,1888 SARS-CoV-2 Vaccines Beyond the Pandemic Era Ritthideach Yorsaeng,Farid Rahimi ,Shisan Bao,Amornphat Kitro,2025-11-25 SARS CoV 2 or COVID 19 vaccines were developed rapidly within one year after the emergence of the COVID 19 pandemic The first generation of COVID 19 vaccines was based on the ancestral or wild type strain which could reduce the risk of life threatening infections Notably SARS CoV 2 genomic variants with altered surface antigens did not emerge until many months into the pandemic after massive viral replication To maintain the integrity of their genome coronaviruses use a specialized RNA proofreading mechanism that

excises misincorporated nucleotides from the nascent RNA by the NSP14 NSP10 complex containing an exonuclease domain. As a result we have seen various variants of the virus since the disease's outbreak, some of which are highly contagious and/or capable of evading immunity such as the Omicron B.1.1.529 variant. Additionally, it is important to note that vaccine-induced immunity can wane gradually, leading to reduced protection. Before the second generation of COVID-19 vaccines, e.g. bivalent, the vaccines against the original strain were used as boosters. While these boosters can mitigate the disease severity, they may not sufficiently protect against infection with SARS-CoV-2 variants of concern, particularly new subvariants of Omicron. Considering the evolving nature of the pandemic, what is the next step in COVID-19 vaccine development beyond the first generation? Even though most of the global population is no longer naïve to SARS-CoV-2 and despite the World Health Organization's declaration of the end of COVID-19 as a Public Health Emergency of International Concern, the risk of emergence of new variants that cause high case surges and high fatality remain. The use strategies of the vaccine have changed and are adapted continuously to the evolution of the virus and population immunity. This Research Topic is dedicated to exploring the second generation of COVID-19 vaccines, e.g. bivalent and beyond, including monovalent XBB Omicron XBB.1.5 subvariants and subsequent iterations. Recent data on the use of COVID-19 bivalent vaccines from late 2020 onwards are of great interest and can provide valuable insights for future vaccination strategies. Our scope encompasses a wide array of evidence, pulling from animal models, clinical trials, post phase III studies, including immunogenicity assessments in different settings, real-world evidence, efficacy/effectiveness evaluations, and systematic reviews. Submitted manuscripts focusing only on COVID-19 vaccines against the original strain (ancestral or wild type) would be unfit for this collection. We welcome submissions of Original Research, Mini reviews, Reviews, Systematic Reviews, Policy and Practice Reviews, Clinical Trials, Perspectives, Commentaries, Policy Briefs, and Brief Research Reports on the following subtopics: Studies comparing immunogenicity, efficacy, and effectiveness of the new generation vaccines with those against the original viral strain; Vaccines administered to the naïve host, focusing on neonates and pediatric populations; Vaccine for travelers; Vaccine for high-risk groups and occupations; Hybrid immunity; Heterologous strategies; mix and match; Effect of the breakthrough infection on COVID-19 vaccine recipients; Impact of COVID-19 booster vaccination on public health and policy; Immunologic characterization; Adverse events and side effects following vaccination; Interplay of vaccination with long COVID.
