Mentalization-Based Group Therapy (MBT-G) Sigmund Karterud, 2015-09-03 Mentalization based treatment MBT has gained international acclaim as an efficient treatment for patients with borderline personality disorder. The approach is also helpful for other personality disorders and conditions that are difficult to treat, e.g., addiction and eating disorders. MBT consists of a psychoeducational, an individual, and a group therapy component. This is the first comprehensive manual for mentalization based group therapy. The author has developed the manual in close cooperation with Anthony Bateman and a team of group analysts. It covers all the aspects of MBT which are necessary to produce an informed and qualified group therapist. The book covers the theory behind mentalization and borderline personality disorder, especially its evolutionary roots, the structure of MBT, and a discussion of previous experiences with group psychotherapy for borderline patients. The core of the book explains the main principles of MBT-G and provides a powerful means for ensuring that therapists adhere to these principles in a qualified way. The last part contains a full transcript from a real MBT group composed of borderline patients. As the first book dedicated to Group MBT, this book is a valuable and unique addition to the Mentalization literature.

Group Analysis Sigmund Karterud, 2024-04-11 Group Analysis outlines how clinical group analysis can re-establish itself as a leading paradigm for group psychotherapy. Sigmund Karterud explains how the focus of group analysis and its applications can be expanded by stronger emphasis on the philosophy and psychology of the self. The book is divided into four parts: with part one reconsidering the historical roots of group analysis through its founder S. H. Foulkes and part two demonstrating how the fields of evolution, primary emotions, attachment, mentalizing, personality theory, and personality disorders can be integrated with group analysis. Part three develops a philosophy of the self that includes a group self which accounts for the "we-ness" of groups, and part four illustrates how these concepts can inform the practice of group analysis through a series of clinical vignettes addressing the major challenges which face the clinician. *Group Analysis: A Modern Synthesis* will be essential reading for all group psychotherapists in practice and in training. It will also appeal to students of group analytic psychotherapy.

health professionals **Psychotherapy for Borderline Personality Disorder** Anthony Bateman, Peter Fonagy, 2004

Borderline Personality disorder is a severe personality dysfunction characterized by behavioural features such as impulsivity, identity disturbance, suicidal behaviour, emptiness and intense and unstable relationships. Approximately 2% of the population are thought to meet the criteria for BPD. The authors of this volume, Anthony Bateman and Peter Fonagy, have developed a psychoanalytically oriented treatment to BPD known as mentalization treatment. With randomised controlled trials having shown this method to be effective, this book presents the first account of mentalization treatment for BPD. The first section gives an overview of BPD including discussion of nosology, epidemiology, natural history and psychosocial aetiology. It additionally summarises the present state of our research knowledge about effective psychotherapeutic treatments and use of medication. The second section outlines the authors' theoretical approach and contrasts it with other well-known methods including DBT, CAT and CBT. In the extensive final section, the authors outline their clinical approach, starting with how treatment is organised. A detailed account of the transferable features of the model is provided along with the main strategies and techniques of treatment. Numerous clinical examples are given to illustrate the core techniques and detailed information provided about how to apply aspects of the mentalization-based treatment approach in everyday practice. Aimed at mental health professionals along with counsellors, psychotherapists and psychoanalysts, the book will be a valuable tool providing an effective means of treating those suffering from Borderline Personality Disorder.

Mentalization-based Treatment for Borderline Personality Disorder Anthony Bateman, 2006-09-14

Mentalizing, the ability to understand oneself and others by inferring the mental states that lie behind overt behavior, develops during childhood within the context of a secure attachment relationship. It is crucial to self-regulation and constructive intimate relationships. Failure to retain mentalizing, particularly in the midst of emotional interactions, is a core problem in borderline personality disorder and results in severe emotional fluctuations, impulsivity and vulnerability to interpersonal and social interactions. Mentalization-based treatment for borderline personality disorder is a 'How to Do It' book outlining a clinically proven treatment for Borderline Personality Disorder. Containing illustrative clinical examples, it details precisely how to develop and implement treatment and is a companion to the highly successful book *Psychotherapy for Borderline Personality Disorder*. Mentalization-based treatment: This practical guide explains how to treat borderline patients by helping them develop a more robust mentalizing capacity within the context of an attachment relationship. It provides the practitioner with everything they need to know about how to practise mentalizing treatment in day patient and out-patient settings. Enough theory is provided to orientate the clinician and there is step-by-step practical advice on the assessment of mentalizing and interpersonal relationships, how to structure treatment, the use of basic mentalizing interventions and how to apply them, as well as information on what not to do. In addition, it includes a check-list to be used in the assessment of mentalizing and a self-rating exercise for practitioners to evaluate their adherence to mentalizing.

Therapy) P.B. de Maré,2014-09-19 This book originally published in 1972 aimed to provide a theoretical framework for group therapists to guide them through the mass of variables which beset them Its scope therefore is extremely broad for it also touches on philosophy psychology sociology communication and general systems theory In the last chapter certain conclusions are drawn concerning the relationship between group and psycho dynamics The book will be of interest to those who have already had some experience of small medium or large groups and who want to think about their work in more general terms it was not at the time widely realised how radically different and how potentially powerful are the implications of group procedures not only for therapy but in such fields as education industry and politics Freud recognised this when he pointed out the dilemma of having to procure for the group precisely those features which were characteristic of the individual and which are extinguished in him by the formation of the group Whilst the problem for the individual is the intrusion of unconscious factors for the group it is the group s equivalent of consciousness namely communication and organization which is in a quandary The group model differs crucially from the psychological but they may relate in the sense

that as Freud indicated neurosis represents a recapitulation within the individual of mankind's group history. The unconscious mind then is a group phenomenon. In other words, group theory turns psychoanalysis upside down and begins at the point where Freud left off relating neurosis to its social sources. In the light of the group approach, therefore, neurosis and certain of the psychoses can be viewed as localized deposits of unresolved group experiences within the individual, whether they be past, current, or an expectation of the future, a feature which makes traumatic neuroses more understandable since they cannot be explained in terms of infantile neurosis. The author suggested the possibility of a new development in group techniques, namely that of large group therapy, freed of community ties or training considerations, in which attitudes and ideologies make themselves evident not as cloudy idealistic non sequiturs but as crucial and clearly definable climates which either impede or promote communication and the flow of information.
