Postural Correction Jane Johnson, 2015-11-03 Postural Correction presents 30 of the most commonly occurring postural conditions in a comprehensive format providing hands on therapists and body workers the knowledge and resources to help clients address their malalignments Focusing on treatment rather than assessment it takes a direct approach and applies specific techniques to improve posture from an anatomical rather than aesthetic perspective Primarily concerned with the lengthening of shortened tissues to help realign body parts Postural Correction offers a collective approach to remedying malalignment Techniques vary for each posture correction including deep tissue massage simple passive stretches soft tissue release common trigger points and gentle limb traction Because weak or poorly functioning muscles may contribute to postural problems the text notes what muscles need to be strengthened and includes recommendations on techniques Suggestions also are made for those postures that are difficult to correct with hands on techniques such as scoliosis genu valgum knock knees and genu varum bow legs Recognizing that the work clients can carry out independently is a crucial component of long term postural correction this guide includes information on how clients can continue their therapy independently between or at the conclusion of their therapy sessions Therapists can take these techniques and recommendations to advise educate and guide clients in their efforts Much attention is paid to lifestyle activities and habitual use or resting of a body part that may have

led to the initial pain and malalignment Structured by anatomical regions of the body to make accessing information quick and easy Postural Correction tackles postural concerns commonly affecting the spine pelvis upper limbs including the shoulder and elbow and lower limbs including the hip knee ankle and foot Examples from various sports and demographics such as the elderly offer contextual and applied value Descriptions avoid biomechanical jargon and instead focus on simple clear explanations Information is also included for when hands on techniques are limited in correcting a particular posture Special features make this book unique and useful Full color anatomical illustrations and photographs present a clear visual of what will help bring about postural change Consistency with the other titles in the Hands On Guides for Therapists series ensures that the manual therapies throughout this book are easily accessible An overview of each malalignment includes the muscles that are shortened or lengthened notes about each posture a bulleted list of ideas grouped according to whether these are carried out by the therapist or the client and rationale for the suggested corrective techniques Concluding comments summarize the information for access at a glance Earn continuing education credits units A continuing education course and exam that uses this book is also available It may be purchased separately or as part of a package that includes all the course materials and exam

Observation-based Posture Assessment Brian D. Lowe, Patricia Weir, David Andrews, 2014 This report describes an observational approach for assessing postural stress of the trunk and upper limbs that is intended to improve risk analysis for prevention of musculoskeletal disorders The approach is supported by several recent research studies These studies have evaluated how much time it takes observers to classify specific trunk and upper limb postures how frequently observers are likely to make posture classification errors and the magnitude of these errors The frequency and magnitude of posture classification errors depend on how many categories levels are available from which to classify the specific posture Recent studies suggest that optimal posture analysis performance is obtained by partitioning trunk flexion range of motion into 4 categories of 30 increments trunk lateral bend into 3 categories of 15 increments shoulder flexion into 5 categories of 30 shoulder abduction into 5 categories of 30 and elbow flexion into 4 categories of 30 These categories are suggested because they optimize how rapidly and effectively analysts can visually judge posture This report also presents more general guidelines for the video recording of posture and for the posture analysis process Guidelines for video recording address such factors as camera position field of view lighting and duration of recording Guidelines for posture analysis address enhancements such as the benefits of digital video computer software training and use of visual reference and perspective cues Information in this report can assist health safety ergonomics and risk management loss control practitioners who conduct job worksite assessments of lifting pushing pulling carrying and or manual handling risk factors NIOSHTIC 2
