

10 Common PC Problems And Solutions

I. Computer won't turn on

Solutions:

1. Check the power supply

- If it's a desktop, is the old power supply still there? A desktop that has completely stopped all change. Yes, the first thing to do is to plug it in and see if it works. If it does, then it's a power supply issue. It could mean the power supply is faulty, or, if you're using a different power supply, it may be a power supply issue. A power supply is a device that converts AC power into DC power.
- If your PC is a desktop computer and power's out, check that it's not the plug socket or fault by unplugging it from a different socket. If that doesn't work, it could be that the power supply is bad. PC fans spin.
