

## 1. GENERAL

## (1) Air Cleaner

## (a) Flat type air cleaner

The flat type air cleaner uses a filter paper type element.

## (b) Cyclone type air cleaner

The cyclone type air cleaner uses a filter paper type element.

Because of plastic coating and heat treatment, the element is highly resistant to water and oil. Even if it is contaminated, its functions can be regained by cleaning.

The intake air is given a spin by the vanes for centrifugal separation of large particles of dust and dirt. Small particles of dust and dirt are filtered out by the filter paper element so that a clean air is drawn into the engine.

The standard air cleaner is a single element type, and the double element type can be effective for operation safety under unusual conditions with a lot of dust and dirt.
