Dan Seidov,Bernd J. Haupt,Mark A. Maslin,2001-01-09 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 126 Until a few decades ago scientists generally believed that significant large scale past global and regional climate changes occurred at a gradual pace within a time scale of many centuries or millennia A secondary assumption followed climate change was scarcely perceptible during a human lifetime Recent paleoclimatic studies however have proven otherwise that global climate can change extremely rapidly In fact there is good evidence that in the past at least regional mean annual temperatures changed by several degrees Celsius on a time scale of several centuries to several decades [Magnetic Helicity in Space and Laboratory Plasmas](#) Michael R. Canfield,Alexei A. Pevtsov,1999-01-26 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 111 Using the concept of magnetic helicity physicists and mathematicians describe the topology of magnetic fields twisting writhing and linkage Mathematically helicity is related to linking integrals which Gauss introduced in the 19th century to describe the paths of asteroids in the sky In the late 1970s the concept proved to be critical to understand laboratory plasma experiments on magnetic reconnection dynamos and magnetic field relaxation In the late 1980s it proved equally important in understanding turbulence in the solar wind and the interplanetary magnetic field During the last five years interest in magnetic helicity has grown dramatically in solar physics and it will continue to grow as observations of vector magnetic fields become increasingly sophisticated [UV, Optical, and IR Space Telescopes and Instruments](#)
