### **Calf and Heifer Feeding and management**

Zhijun Cao, Michael Van Amburgh, 2020-12-11. From birth to first calving, the replacement heifer undergoes tremendous changes anatomically as well as in feeding and management practices. The calf changes from being a pseudo monogastric to a full ruminant within a period of two months. During the same period, the calf is fed colostrum, milk or milk replacer and starter with or without hay. Notably, the lifetime milk production and health of a dairy cow is highly dependent on early life nutrition and management of the calf and

subsequently the heifer Hence animal scientists continue to investigate critical areas such as colostrum feeding the level of liquid feeding gut microbial succession energy and protein levels housing health management and their interactions with the animal in an effort to help dairy producers raise successful and sustainable dairy enterprises Miscel·lània zoològica ,2000
