Mechanics Of Functionally Graded Material Structures:

Mechanics Of Functionally Graded Material Structures Isaac E Elishakoff, Demetris Pentaras, Cristina Gentilini, 2015-10-29 Mechanics of Functionally Graded Material Structures is an authoritative and fresh look at various functionally graded materials customizing them with various structures. The book is devoted to tailoring material properties to the needed structural performance. The authors pair materials with the appropriate structures based upon their purpose and use. Material grading of structures depending upon thickness, axial and polar directions are discussed. Three dimensional analysis of rectangular plates made of functional graded materials and vibrational tailoring of inhomogeneous beams and circular plates are both covered in great detail. The authors derive novel closed form solutions that can serve as benchmarks that numerical solutions can be compared to. These are published for the first time in the literature. This is a unique book that gives the first exposition of the effects of various grading mechanisms on the structural behavior as well as taking into account vibrations and buckling.

[Mechanics of Functionally Graded Materials and Structures](#) Farzad Ebrahimi, 2020-01-08 The Functionally Graded Materials FGM concept originated in Japan in 1984 during the spaceplane project in the form of a proposed thermal barrier material capable of withstanding a surface temperature of 2000 K and a temperature gradient of 1000 K across a cross section 10 mm. The materials can be designed for specific function and applications. FGMs offer great promise in applications where the operating conditions are extreme. For example wear resistant linings for handling large heavy abrasive ore particles, rocket heat shields, heat exchanger tubes, thermoelectric generators, heat engine components, plasma facings for fusion reactors and electrically insulating metal ceramic joints. They are also ideal for minimizing thermomechanical mismatch in metal ceramic bonding. This book is a result of contributions of experts from the international scientific community working in different aspects of functionally graded materials and structures and reports on the latest research and development findings on this topic through original and innovative research studies. Through its six chapters the reader will have access to works related to processing characteristics, modeling and applications of functionally graded materials and structures. The book contains up to date publications from leading experts and the edition is intended to provide valuable recent information to the professionals involved in functionally graded materials and structure analysis and applications. The text is addressed not only to researchers but also to professional engineers, students and other experts in a variety of disciplines both academic and industrial seeking to gain a better understanding of what has been done in the field recently and what open problems are in this area.
