*Visual Attention Mechanisms* Virginio Cantoni, Maria Marinaro, Alfredo Petrosino, 2012-12-06 Proceedings of the Fifth International School on Neural Networks E R Caianiello on Visual Attention Mechanisms held 23-28 October 2000 in Vietri sul Mare Italy

nisms held 23-28 October 2000 in Vietri sul Mare Italy The book covers a number of broad themes relevant to visual attention ranging from computer vision to psychology and physiology of vision The main theme of the book is the attention processes of vision systems and it aims to point out the analogies and the divergences of biological vision with the frameworks introduced by computer scientists in artificial vision

**Mechanisms of Visual Attention** Werner X. Schneider, Sabine Maasen, 1998

In order to produce coherent behaviour in a complex world forms of visual attention are necessary in order for us to select appropriate objects for action Over the past ten years there have been considerable advances in research into visual attention with many of these advances linked to interdisciplinary research in experimental psychology, neuropsychology, neurophysiology and functional imaging This work has begun to allow us to understand not only the functional properties of visual attention but also how attentional processes are localized in the brain the cognitive neuroscience of visual attention This special issue draws together research from leading figures in this field to highlight recent progress in understanding how selective processes operate in perception and action

**Selective Visual Attention** Liming

Zhang, Weisi Lin, 2013-03-15 Visual attention is a relatively new area of study combining a number of disciplines artificial neural networks, artificial intelligence, vision science and psychology The aim is to build computational models similar to human vision in order to solve tough problems for many potential applications including object recognition, unmanned vehicle navigation and image and video coding and processing In this book the authors provide an up to date and highly applied introduction to the topic of visual attention aiding researchers in creating powerful computer vision systems Areas covered include the significance of vision research, psychology and computer vision, existing computational visual attention models and the authors contributions on visual attention models and applications in various image and video processing tasks This book is geared for graduates, students and researchers in neural networks, image processing, machine learning, computer vision and other areas of biologically inspired model building and applications The book can also be used by practicing engineers looking for techniques involving the application of image coding, video processing, machine vision and brain-like robots to real world systems Other students and researchers with interdisciplinary interests will also find this book appealing Provides a key knowledge boost to developers of image processing applications Is unique in emphasizing the practical utility of attention mechanisms Includes a number of real world examples that readers can implement in their own work robot

navigation and object selection image and video quality assessment image and video coding Provides codes for users to apply in practical attentional models and mechanisms    **Mechanisms of Visual Attention** Peter C. Badgio,1986    *Attention Correction Mechanism in Visual Contexts in Visual Question Answering* Komal Sharan,2018 To answer a question about an image or to merely describe an object in an image for answering the current visual question answering systems have been augmented with attention mechanisms The visual question answering mechanisms before the advent of attention mechanisms worked on the principle of training over a combination of image feature vectors and question and answer embeddings Attention mechanisms like stacked attention networks and hierarchical co attention attention mechanisms help to figure out which parts of the image to attend but hardly emphasize on correcting attention We propose a mechanism for correcting visual attention by using the concept of saliency of parts of the image being attended to We primarily use a study of how the gaze of humans shifts over an image can help us improving the attention generated by introducing an auxiliary loss in a standard stacked attention network pipeline For this mechanism we use a dataset known as the VQA HAT dataset which is a large scale collection of images containing regions explored by humans and we use this dataset for further augmenting the work    **Visual Attention and Cognition** W.H. Zangemeister,H.S. Stiehl,C. Freksa,1996-09-23 The goal of this book is to put together some of the main interdisciplinary aspects that play a role in visual attention and cognition The book is aimed at researchers and students with interdisciplinary interest In the first chapter a general discussion of the influential scanpath theory and its implications for human and robot vision is presented Subsequently four characteristic aspects of the general theme are dealt with in topical chapters each of which presents some of the different viewpoints of the various disciplines involved They cover neuropsychology clinical neuroscience modeling and applications Each of the chapters opens with a synopsis tying together the individual contributions    *Visual Attention and Consciousness* Jay Friedenberg,2013 This book is an ambitious interdisciplinary survey of the empirical literature on many different aspects of visual attention and consciousness It may be used as a primary or ancillary text for graduate courses in perception vision consciousness or philosophy of mind    **Modulation of Neuronal Responses** Giedrius T. Buračas,2003    **Handbook of Image Engineering** Yu-Jin Zhang,2021-01-04 Image techniques have been developed and implemented for various purposes and image engineering IE is a rapidly evolving integrated discipline comprising the study of all the different branches of image techniques and encompassing mathematics physics biology physiology psychology electrical engineering computer science and automation Advances in the field are also closely related to the development of telecommunications biomedical engineering remote sensing surveying and mapping as well as document processing and industrial applications IE involves three related and partially overlapping groups of image techniques image processing IP in its narrow sense image analysis IA and image understanding IU and the integration of these three groups makes the discipline of image engineering an important part of the modern information era This is the first handbook on image engineering and provides a well structured

comprehensive overview of this new discipline It also offers detailed information on the various image techniques It is a valuable reference resource for R D professional and undergraduate students involved in image related activities

Infants and Adults Louisa Valeria Kulke,2015 *Theories of Visual Attention - linking cognition, neuropsychology, and neurophysiology* Søren Kyllingsbæk, Signe Allerup Vangkilde, Claus Bundesen,2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen's 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research

Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies **The Cognitive Neuroscience of Visual Distractor Interference** Tony Ro,1997 Top-down Control of Visual Attention and Awareness ,2006
