### **REQUIREMENTS:**

### **OVERVIEW AND ANATOMY:**

1. Plants, algae, and photosynthetic bacteria are called \_\_\_\_\_ because they can produce their own organic food. This food not only feeds the producer, but also the other \_\_\_\_\_ levels of the food web.
2. During photosynthesis, plants use \_\_\_\_\_ from the sun to convert \_\_\_\_\_ from the air and \_\_\_\_\_ from the soil into the high-energy food molecule \_\_\_\_\_.
3. Carbon dioxide enters the plant through pores found on the bottom of \_\_\_\_\_. Water enters the plant through the \_\_\_\_\_, an organ system that is found underground. Both of these organs are spread out and feathery, which maximizes their \_\_\_\_\_ for absorption.
4. If you zoom into a plant tissue under the microscope, you can tell that it is made of \_\_\_\_\_ cells because they all have special organelles, a nucleus to store DNA, and the tissue is multicellular. You would also see that water is stored in the \_\_\_\_\_ of each cell. This supplies water for photosynthesis but also helps to hold plants up against \_\_\_\_\_.
