Metabolic Freedom is for those who are fed up with the failed diet dogma of fad diets, calorie counting and excessive exercise and are looking to finally break free with a new paradigm on how to reset their metabolism to achieve metabolic freedom. With Metabolic Freedom readers will understand how their metabolism works and the top contributors to why their metabolism has become inefficient and then deep dive into all of the main factors that influence a free metabolism including the power of keto fasting, improved sleep, cutting edge bio hacks, mindset shifts, smart exercise routines, specific food swaps and more. This book will also explore the way hormones impact these processes as they impact male and female bodies differently. Most importantly, all of these tools are combined at the end of the book for the user to start implementing a clear roadmap to achieve Metabolic Freedom within 30 days by customizing their own plan.

**Ethico-Legal Aspect of AI-driven Driverless Cars** Sadaf Fahim, 2024-08-23 This book is a comparative study of the laws and regulations involving legal and ethical issues related to Artificial Intelligence AI in particular for self driving cars or autonomous vehicles AVs. It identifies, analyzes and points out such issues via a study of laws and regulations in India, Germany and California determining the legal liabilities of designer, developer, programmer, manufacturer, producer, users or AI in the case of AVs. AV technology is being touted as one that is poised to bring revolution in the mobility ecosystem by lessening the number of accidents and by providing other benefits such as potential to reduce traffic, increase safety and mobility, lower energy usage and generate free time. Despite having such a potential to shape and transform the future and involvement of tech giants like Google, Amazon, Facebook and Microsoft, regulations around AI and AVs are still on the drawing board stage in many countries as they grapple on how to address this issue which has both local and global players involved and affects both local and global populace. The book studies and compares the existing and evolving regulations in three different regions to bring out the lacunae, loopholes and best practices. It highlights when AI deserves legal personhood and when it requires to be granted legal standing. It also points out the civil and criminal legal liabilities arising when AV is involved in an accident and the ethical issues involved in the deployment of AI. The book goes beyond new regulations to analyze whether challenges and problems arising from AI technology can be addressed within existing civil and criminal laws, procedural and substantive law or whether a *sui generis* law on AI technology is required. The analysis and the results showcased here would be highly useful for multi disciplinary research on the topic. Regulators of both industry and governance would find the contents invaluable in getting a broader picture of the issues and concerns around this topic along with policy makers would be able to come up with more effective regulations on AI and AVs.
