MEASUREMENTS

Observables are measurements including uncertainties!

Measurements always have uncertainty! Measurement (with or without "precision" attached) is telling us a number including uncertainty. Uncertainty provides an estimate of the maximum amount that we should expect the measurement to differ by. When you are making a measurement, there are a number of things that you can do to make sure that your measurement is as accurate as possible. You can do this by making sure that you are using the right tools, that you are taking enough measurements, and that you are taking care to avoid any systematic errors.

Example 1 - Measuring a length

Length of a rod	Length of a rod
10.0 cm	10.0 cm

Metropolitan Universities, 2006 Science Inquiry, Argument and Language Brian M. different orientations with some focusing on science argument as separate to normal teaching practices that is teaching students about science argument prior to using it in the classroom context while others have focused on embedding science argument as a critical component of the inquiry process The current emphasis on science literacy has emerged because of greater understanding of the role of language in doing and reporting on science Science is not viewed as being separate from language and thus there is emerging research emphasis on how best to improving science teaching and learning through a language perspective Again the research orientations are parallel to the research on scientific argumentation in that the focus is generally between instruction separate to practice as opposed to embedding language practices within the science classroom context
