Building Embedded Linux Systems Karim Yaghmour, Jon Masters, Gilad Ben-Yossef, Philippe Gerum, 2008-08-15 There is a great deal of excitement surrounding the use of Linux in embedded systems for everything from cell phones to car ABS systems and water filtration plants but not a lot of practical information. Building Embedded Linux Systems offers an in depth hard core guide to putting together embedded systems based on Linux. Updated for the latest version of the Linux kernel this new edition gives you the basics of building embedded Linux systems along with the configuration setup and use of more than 40 different open source and free software packages in common use. The book also looks at the strengths and weaknesses of using Linux in an embedded system plus a discussion of licensing issues and an introduction to real time with a discussion of real time options for Linux. This indispensable book features arcane and previously undocumented procedures for Building your own GNU development toolchain. Using an efficient embedded development framework. Selecting, configuring, building and installing a target specific kernel. Creating a complete target root filesystem. Setting up, manipulating and using solid state storage devices. Installing and configuring a bootloader for the target. Cross compiling a slew of utilities and packages. Debugging your embedded system using a plethora of tools and techniques. Using the uClibc, BusyBox, U-Boot, OpenSSH, tftpd, strace and gdb packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, Building Embedded Linux Systems greatly simplifies the task of keeping complete control over your embedded operating system.

Embedded Linux System Design and Development P. Raghavan, Amol Lad, Sriram Neelakandan, 2005-12-21 Based upon the authors experience in designing and deploying an embedded Linux system with a variety of applications. Embedded Linux System Design and Development contains a full embedded Linux system development roadmap for systems architects and software programmers. Explaining the issues that arise out of the use of Linux in embedded systems, the book facilitates movement to embedded Linux from traditional real time operating systems and describes the system design model containing embedded Linux. This book delivers practical solutions for writing, debugging and profiling applications and drivers in embedded Linux and for understanding Linux BSP architecture. It enables you to understand various drivers such as serial, I2C and USB gadgets, uClinux architecture and its programming model and the embedded Linux graphics subsystem. The text also promotes learning of methods to reduce system boot time, optimize memory and storage and find memory leaks and corruption in applications. This volume benefits IT managers in planning to choose an embedded Linux distribution and in creating a roadmap for OS transition. It also describes the application of the Linux licensing model in commercial products.
