**The Inversion Factor** Linda Bernardi, Sanjay E. Sarma, Kenneth Traub, 2018-09-11 Why companies need to move away from a product first orientation to pursuing innovation based on customer need In the past companies found success with a product first orientation they made a thing that did a thing The Inversion Factor explains why the companies of today and tomorrow will have to abandon the product first orientation Rather than asking How do the products we make meet customer needs companies should ask How can technology help us reimagine and fill a need Zipcar for example instead of developing another vehicle for moving people from point A to point B reimagined how people interacted with vehicles Zipcar inverted the traditional car company mission The authors explain how the introduction of smart objects connected by the Internet of Things signals fundamental changes for business The IoT where real and digital coexist is powering new ways to meet human needs Companies that know this include giants like Amazon Airbnb Uber Google Tesla and Apple as well as less famous companies like Tile Visenti and Augury The Inversion Factor offers a roadmap for businesses that want to follow in their footsteps The authors chart the evolution of three IoTs the Internet of Things devices connected to the Internet the Intelligence of Things devices that host software applications and the Innovation of Things devices that become experiences Finally they offer a blueprint for businesses making the transition to inversion and interviews with leaders of major companies and game changing startups *Integration of Energy, Information, Transportation and Humanity* C.C.

Chan, George You Zhou, Wei Han, 2023-10-11 Focusing on energy transportation information and economic networks and flows Integration of Energy Information Transportation and Humanity uniquely examines the interconnection interaction and integration across these multiple sectors It helps readers understand the correlation of energy transportation and information via the integration of humanity world cyber world and physical world It clearly explains the objectives of the integration of energy network transportation network information network humanity network as well as the integration of energy flow information flow material flow and value flow 4N4F the philosophy science and engineering of the integration of 4N4F the mechanism keys and benefits of the integration of 4N4F the carriers of the integration of 4N4F and the framework of the integration of 4N4F Synthesizes the newest developments in digital technologies and digital economy Includes case studies and examples that illustrate the application of methodologies and technologies employed Useful for both theoretically and technically oriented researchers *Applications and Techniques in Information Security* Lynn Batten, Gang Li, 2016-09-26 This book constitutes the refereed proceedings of the International Conference on Applications and

Techniques in Information Security ATIS 2016 held in Cairns Australia October 2016 The 10 revised full papers and three short papers presented together with two invited talks were carefully reviewed and selected from 38 submissions The papers are organized in topical sections on invited speeches attacks on data security systems detection of attacks on data security systems data security data privacy *Learning Rates of Electric Vehicles* Andreas Zerfaß, 2017-11-01 Governments of many

countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport related carbon dioxide CO<sub>2</sub> and air pollutant emissions. However, battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs) have been more expensive than their conventional counterparts and suffer from relatively short electric driving ranges, which still hampers the market potential of these vehicles. Despite persisting shortfalls, mechanisms such as technological learning and economies of scale promise to improve the techno-economic performance of BEVs and PHEVs in the short to mid term. Here, the author seeks to obtain insight into the techno-economic prospects of BEVs and PHEVs by i) establishing experience curves and ii) quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time series analysis. The analysis captures the situation in Germany between 2010 and 2016.

**The ULTIMATE Tesla Coil Design and Construction Guide** Mitch Tilbury, 2007-09-21 The only book available to cover the Tesla coil in so much detail. The Ultimate Tesla Coil Design and Construction Guide is a one-stop reference covering the theory, design tools and techniques necessary to create the Tesla coil using modern materials. This unique resource utilizes Excel spreadsheets to perform calculations and SPICE simulation models on the companion website to enhance understanding of coil performance and operating theory.

**Electric and Hybrid Vehicles** Iqbal Husain, 2021-02-22 A thoroughly revised third edition of this widely praised bestselling textbook presents a comprehensive systems level perspective of electric and hybrid vehicles with emphasis on technical aspects, mathematical relationships and basic design guidelines. The emerging technologies of electric vehicles require the dedication of current and future engineers, so the target audience for the book is the young professionals and students in engineering eager to learn about the area. The book is concise and clear, its mathematics are kept to a necessary minimum and it contains a well-balanced set of contents of the complex technology. Engineers of multiple disciplines can either get a broader overview or explore in depth a particular aspect of electric or hybrid vehicles. Additions in the third edition include simulation based design analysis of electric and hybrid vehicles and their powertrain components, particularly that of traction inverters, electric machines and motor drives. The technology trends to incorporate wide bandgap power electronics and reduced rare earth permanent magnet electric machines in the powertrain components have been highlighted. Charging stations are a critical component for the electric vehicle infrastructure and hence a chapter on vehicle interactions with the power grid has been added. Autonomous driving is another emerging technology and a chapter is included describing the autonomous driving system architecture and the hardware and software needs for such systems. The platform has been set in this book for system level simulations to develop models using various softwares used in academia and industry such as MATLAB Simulink, PLECS, PSIM, Motor CAD and Altair Flux. Examples and simulation results are provided in this edition using these software tools. The third edition is a timely revision and contribution to the field of electric vehicles that has reached recently notable markets in a more and more environmentally sensitive world.
