Artificial intelligence is changing the way we create and evaluate information and this is happening during an infodemic while all governments and their citizens face the important challenge of disinformation affecting politics public health e g COVID 19 financial markets and elections. Although the impact of disinformation is intrinsically difficult to quantify and prone to overestimation in the popular consciousness specific examples such as lynchings catalyzed by disinformation spread over social media highlight that the threat it poses crosses social scales and boundaries. This threat extends into the realm of military combat as early as 2019 a NATO StratCom experiment established that social media exploitation enabled successfully influencing soldiers participating in an exercise to carry out desired behaviors such as leaving their positions not fulfilling duties etc Bay and Biteniece 2019. Thus information has become a global safety issue while disinformation can kill. While malign actors weaponized information for years governments have embedded information as a war fighting function. The use of AI is essential for scale speed and automation of offensive and defensive online influence operations.
