and Southeast Asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants. In order to mitigate the issues arising from conventional internal combustion engine powered vehicles, there has been a considerable acceleration in the adoption of electric vehicles (EVs). Research has shown that the impact of fossil fuel use in transportation and surging demand in power, owing to the growing EV charging infrastructure, can potentially be minimized by smart microgrids. As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design, it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment. Practical issues such as fleet management, coordinated operation, repurposing of batteries, and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure. This book explores such a perspective with contributions from leading experts on planning, analysis, optimization, and management of electrified transportation and the transportation infrastructure. The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications. It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry, business, and consumer applications. We expect the book to serve as a reference for a larger audience including power system architects, practitioners, developers, new researchers, and graduate level students, especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia.

Proceedings
National Electric Light Association, 1907 *Digital Twin Development and Deployment on the Cloud* Nassim Khaled, Bibin Pattel, Affan Siddiqui, 2020-05-24
Digital Twin Development and Deployment in the Cloud: Developing Cloud-Friendly Dynamic Models Using Simulink, Simscape™ and Amazon AWS promotes a physics-based approach to the field of digital twins. Through the use of multiphysics models running in the cloud, significant improvement to the diagnostics and prognostic of systems can be attained. The book draws a clear definition of digital twins, helping business leaders clearly identify the value it brings. In addition, it outlines the key elements needed for deployment, including the hardware and software tools needed. Special attention is paid to the process of developing and deploying the multi-physics models of the digital twins. Provides a high-level overview of digital twins and their underutilization in the field of asset management and maintenance. Proposes a streamline process to create digital twins for a wide variety of applications using MATLAB Simscape™. Deploys developed digital twins on Amazon Web Services. Includes MATLAB and Simulink codes available for free download on MATLAB central. Covers popular prototyping hardware such as Arduino and Raspberry Pi.
