Observation, Experiment, and Hypothesis in Modern Physical Science Peter Achinstein, Owen Hannaway, 1985 These original contributions by philosophers and historians of science discuss a range of issues pertaining to the testing of hypotheses in modern physics by observation and experiment. Chapters by Lawrence Sklar, Dudley Shapere, Richard Boyd, R.C. Jeffrey, Peter Achinstein, and Ronald Laymon explore general philosophical themes with applications to modern physics and astrophysics. The themes include the nature of the hypothetico-deductive method, the concept of observation and the validity of the theoretical observation distinction, the probabilistic basis of confirmation and the testing of idealizations and approximations. The remaining four chapters focus on the history of particular twentieth century experiments, the instruments and techniques utilized and the hypotheses they were designed to test. Peter Galison reviews the development of the bubble chamber. Roger Stuewer recounts a sharp dispute between physicists in Cambridge and Vienna over the interpretation of artificial disintegration experiments. John Rigden provides a history of the magnetic resonance method and Geoffrey Joseph suggests a statistical interpretation of quantum mechanics that can be used to interpret the Stern-Gerlach and double-slit experiments. This book inaugurates the series *Studies from the Johns Hopkins Center for the History and Philosophy of Science* directed by Peter Achinstein and Owen Hannaway. A Bradford Book.

His assignment to enter the mind of a key person in a historically crucial moment to affect his host's motivation without forcing his choices to make possible an alternative outcome.

www.goodreads.com **New Scientist and Science Journal**, 1994 **Patrick Suppes: Scientific Philosopher** P. Humphreys, 1994-09-30 Patrick Suppes is a philosopher and scientist whose contributions range over probability and statistics, mathematical and experimental psychology, the foundations of physics, education theory, the philosophy of language, measurement theory and the philosophy of science. He has also been a pioneer in the area of computer-assisted instruction. In each of these areas Suppes has provided seminal ideas that in some cases led to shaping the direction of research in the field. The papers contained in this collection were commissioned with the mandate of advancing research in their respective fields rather than retrospectively surveying the contributions that Suppes himself has made. The authors form an interesting mixture of researchers in both formal philosophy of science and science itself, all of whom have been inspired by his ideas. To maintain the spirit of constructive dialogue that characterizes Suppes's intellectual style, he has written individual responses to each article. In Volume 1, *Probability and Probabilistic Causality*, nineteen distinguished philosophers and scientists focus their attention on probabilistic issues. In Part I, the contributors explore axiomatic representations of probability theory, including qualitative and interval-valued probabilities as well as traditional point-valued probabilities. Belief structures and the dynamics of belief are also treated in detail. In Part II, the rapidly growing field of probabilistic causation is assessed from

both formal and empirical viewpoints For probability theorists statisticians economists philosophers of science psychologists and those interested in the foundations of mathematical social science In Volume 2 Philosophy of Physics Theory Structure and Measurement Theory fifteen distinguished philosophers and scientists cover a wide variety of topics Part III covers issues in quantum theory geometry classical mechanics and computational physics Part IV explores Suppes's well known set theoretic account of scientific theories which has served him well throughout his career Suppes's contributions to measurement theory have been widely used in mathematical psychology and elsewhere and this material is the subject of Part V For physicists logicians workers in mathematical social science and philosophers of science In Volume 3 Philosophy of Language and Logic Learning and Action Theory fourteen distinguished philosophers and scientists explore issues in the philosophy of language logic and philosophical psychology Suppes's suggestions that quantum theory requires a rethinking of classical logic form a particularly sharp account of that controversial thesis and Part VI deals with this issue together with topics in the philosophy of language and logic including relational grammars and anaphora Part VII deals with issues in psychology action theory and robotics while Part VIII concludes with a general survey of Suppes's views in the philosophy of science A comprehensive chronological and topical bibliography of Suppes's writings is included in this volume For philosophers of language theoretical linguists logicians workers in mathematical social sciences and philosophers of science
