Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.

Computer Vision for Multimedia Applications: Methods and Solutions Wang, Jinjun, Cheng, Jian, Jiang, Shuqiang, 2010-10-31 This book presents the latest developments in computer vision methods applicable to various problems in multimedia computing including new ideas as well as problems in computer vision and multimedia computing. Provided by publisher [Computer Vision--ECCV '92](#) Giulio Sandini, 1992-04-29 This volume collects the papers accepted for presentation at the Second European Conference on Computer Vision held in Santa Margherita Ligure Italy May 19-22 1992. Sixteen long papers, 41 short papers and 48 posters were selected from 308 submissions. The contributions are structured into 14 sections reflecting the major research topics in computer vision currently investigated worldwide. The sections are entitled features, color calibration and matching, depth, stereo, motion tracking, active vision, binocular heads, curved surfaces and objects, reconstruction and shape recognition and applications.

Manual of Remote Sensing: Theory, instruments, and techniques Robert Grier Reeves, American Society of Photogrammetry, 1975 *Manual of Remote Sensing* American Society of Photogrammetry, 1975 [Pattern Classification](#) Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Cybernetics Abstracts, 1974 [Color Image Processing](#) Rastislav Lukac, Konstantinos N. Plataniotis, 2018-10-03 Color Image Processing Methods and Applications embraces two decades of extraordinary growth in the technologies and

applications for color image processing. The book offers comprehensive coverage of state of the art systems processing techniques and emerging applications of digital color imaging. To elucidate the significant progress in specialized areas the editors invited renowned authorities to address specific research challenges and recent trends in their area of expertise. The book begins by focusing on color fundamentals including color management, gamut mapping and color constancy. The remaining chapters detail the latest techniques and approaches to contemporary and traditional color image processing and analysis for a broad spectrum of sophisticated applications including Vector and semantic processing, Secure imaging, Object recognition and feature detection, Facial and retinal image analysis, Digital camera image processing, Spectral and superresolution imaging, Image and video colorization, Virtual restoration of artwork, Video shot segmentation and surveillance. *Color Image Processing Methods and Applications* is a versatile resource that can be used as a graduate textbook or as stand alone reference for the design and the implementation of various image and video processing tasks for cutting edge applications. This book is part of the Digital Imaging and Computer Vision series.

[Comprehensive Chemometrics](#) Steven Brown, Roma Tauler, Beata Walczak, 2020-05-26. Comprehensive Chemometrics Second Edition. Four Volume Set. Features expanded and updated coverage along with new content that covers advances in

the field since the previous edition published in 2009. Subject of note include updates in the fields of multidimensional and megavariable data analysis, omics data analysis, big chemical and biochemical data analysis, data fusion and sparse methods. The book follows a similar structure to the previous edition using the same section titles to frame articles. Many chapters from the previous edition are updated but there are also many new chapters on the latest developments. Presents integrated reviews of each chemical and biological method examining their merits and limitations through practical examples and extensive visuals. Bridges a gap in knowledge covering developments in the field since the first edition published in 2009. Meticulously organized with articles split into 4 sections and 12 sub sections on key topics to allow students, researchers and professionals to find relevant information quickly and easily. Written by academics and practitioners from various fields and regions to ensure that the knowledge within is easily understood and applicable to a large audience.
