Biomimetics for Architecture & Design Göran Pohl, Werner Nachtigall, 2015-10-30 This book provides the readers with a timely guide to the application of biomimetic principles in architecture and engineering design. As a result of a combined effort by two internationally recognized authorities the biologist Werner Nachtigall and the architect Göran Pohl the book describes the principles which can be used to compare nature and technology and at the same time it presents detailed explanations and examples showing how biology can be used as a source of inspiration and translated in building and architectural solutions biomimicry. Even though nature cannot be directly copied the living world can provide architects and engineers with a wealth of analogues and inspirations for their own creative designs. But how can analysis of natural entities give rise to advanced and sustainable design? By reporting on the latest bionic design methods and using extensive artwork the book guides readers through the field of nature inspired architecture offering an extraordinary resource for professional architects engineers designers and urban planners as well as for university teachers researchers and students. Natural evolution is seen throughout the book as a powerful resource that can serve architecture and design by providing innovative optimal and sustainable solutions.

[Energy and Seismic Renovation Strategies for Sustainable Cities](#) Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human. In spite of this common ground discussions on sustainability usually give insufficient attention to safety. In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience. Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate. In such countries energy renovation actions should be combined with seismic retrofitting. However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings. These barriers are of different kinds technical e.g. unfeasibility and/or ineffectiveness of conventional retrofit solutions financial e.g. high renovation costs insufficient incentives subsidies organizational e.g. occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions. This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources.

[Cooper-Hewitt Museum of Design and Technology \(C-HMD+T\)](#) Isabel Marisa Corsino Carro, 2009 ABSTRACT If architects are to create a sustainable world one in which we are accountable to the needs of all future generations and living creatures we must recognize that our present form of designing buildings is deeply flawed. Being the number one cause of emission gases building design needs to be revolutionized to be able to surpass such climatic changes and finally harmonize with nature. To create a sustainable

future and solve the global warming crisis architects need to incorporate nature within design through the process known as biomimicry Janine Benyus the author of Biomimicry Innovation Inspired by Nature stressed how nature teaches to solve human problems After billions of years of research and development within nature Benyus believes that nature has perfected itself and has the key to human survival Through biomimicry architects can find solutions to design problems and apply them to sustainable design Sustainable design has not reached its peak in uniting both aesthetics and performance within the design industry Until now architecture focuses more on human needs and economics putting aside what is best for the environment thus leaving a conflict between human and nature This thesis presents an investigation into biomimicry and its architectural applications It is inspired by organisms within nature The final design project will be based on the studies of organisms and how these can be incorporated on a building's entire design program including skin structure journey and circulation From these studies I will synthesize the important components and ideas of these organisms and interpret them into the building's design The building typology chosen for this project is the museum typology which function as a living organism The project will be site specific thus designing a museum that adapts to the site's specific surroundings The goal for this thesis is to discover organisms within nature that can be incorporated and reinterpreted into sustainable architecture It is also crucial to discover and study the complex systems within nature so that architects can incorporate ideas from it to improve architecture design

Motion Sandra Persiani,2019 This book provides readers with a timely guide to the application of biomimetic principles in architecture and engineering design and describes various aspects of motion in living systems Geometric mechanical and rhythmic parameters are listed and illustrated using examples from flora and fauna and contextualized within an integrated mapping of biomechanical combinations that have proved their success in the course of evolution For designers the schemes identify those aspects that have a high probability of being efficiently combined paving the way for new solutions and offering a method of evolutionary problem solving The book guides readers through the field of nature inspired design offering an extraordinary resource for professional architects engineers and designers as well as for researchers and students

Throughout the book natural evolution is approached as a powerful resource that can enrich architecture and design by providing innovative optimal and sustainable solutions

The Use of Biological Analogies for Problem Solving in Engineering Design [microform] Teresa W. (Teresa Winky) Mak,2005 Biomimetic design draws from nature for design ideas For engineers it is not always feasible to rely on personal knowledge of biology to recognize the potential for application As a result prior work in the Biomimetics for Design and Innovation Laboratory has produced a process that identifies relevant phenomena from biological knowledge as stimuli for biomimetic design Inherent to the biomimetic design process is the use of analogy in which knowledge from biology is transferred to the problem of interest One difficulty observed is the inability to

recognize relevant phenomena that can be applied to the problem. The work in this thesis examines the use of biological analogies within the context of three studies. The first study surveyed the concepts generated from the Biomimetic search process. The second study investigated the use of mapping support and fixation effects. The third study examined representations of biological knowledge to facilitate concept generation.
