Numerical Modelling of Wave Energy Converters Matt Folley,2016-06-14

Numerical Modelling of Wave Energy Converters State of the Art Techniques for Single WEC and Converter Arrays presents all the information and techniques required for the numerical modelling of a wave energy converter together with a comparative review of the different available techniques The authors provide clear details on the subject and guidance on its use for WEC design covering topics such as boundary element methods frequency domain models spectral domain models time domain models non linear potential flow models CFD models semi analytical models phase resolving wave propagation models phase averaging wave propagation models parametric design and control optimization mean annual energy yield hydrodynamic loads assessment and environmental impact assessment Each chapter starts by defining the fundamental principles underlying the numerical modelling technique and finishes with a discussion of the technique's limitations and a summary of the main points in the chapter The contents of the chapters are not limited to a description of the mathematics but also include details and discussion of the current available tools examples available in the literature and verification validation and computational requirements In this way the key points of each modelling technique can be identified without having to get deeply involved in the mathematical representation that is at the core of each chapter The book is separated into four parts The first two parts deal with modelling single wave energy converters the third part considers the modelling of arrays and the final part looks at the application of the different modelling techniques to the four most common uses of numerical models It is ideal for graduate engineers and scientists interested in numerical modelling of wave energy converters and decision makers who must review different modelling techniques and assess their suitability and output Consolidates in one volume information and techniques for the numerical modelling of wave energy converters and converter arrays which has up until now been spread around multiple academic journals and conference proceedings making it difficult to access Presents a comparative review of the different numerical modelling techniques applied to wave energy converters discussing their limitations current available tools examples and verification validation and computational requirements

Includes practical examples and simulations available for download at the book's companion website Identifies key points of each modelling technique without getting deeply involved in the mathematical representation **Burning Down the House** Eliot Van Buskirk, 2003 A complete guide to burning CDs including how to remix, record, rip and more **The Canadian Patent Office Record and Register of Copyrights and Trade Marks**, 1940 *Simplified Design of Voltage/Frequency Converters* John Lenk, 1997-09-02 *Simplified Design of V/F Converters* shows how to design and experiment with V/F converters both voltage to frequency and frequency to voltage The design approach here is the same one used in all of John Lenk's best selling books on simplified and practical design Throughout the book design problems start with guidelines for selecting all components on a trial value basis assuming a specific design goal and set of conditions Then using the guideline values in experimental circuits the desired results are produced by varying the experimental component values if needed If you are a working engineer responsible for designing VFCs or selecting IC converters the variety of circuit configurations described here should simplify your task Not only does the book describe converter circuit designs but it also covers the most popular forms of VFC ICs available Throughout the book you will find a wealth of information on VFC ICs and related components including how to test and troubleshoot completed circuits For all skill levels How to design and build V/F converter circuits from scratch IEEE Africon, 2004 MSDN Magazine, 2009-07
