Methods in Alcohol-Related Neuroscience Research Yuan Liu,David M. Lovinger,2002-02-14 Written by a panel of experts Methods in Alcohol Related Neuroscience Research not only provides information of a technical nature but also gives an overview of the many areas in investigating the effects of alcohol on the brain It gives technical guidance for investigators doing research at the molecular cellular systems and behavioral levels These techniques include a wide variety of approaches ranging from gene mapping and examination of molecular interactions of alcohol at the sub cellular level to recording of neural activities in freely behaving animals and imaging alcohol effects on the living human brain

Primate Audition Asif

A. Ghazanfar,2002-08-28 Bringing together the knowledge of world experts on different aspects of primate auditory function this book bridges the epistemological gap between primate ethologists and auditory neurobiologists Leading ethologists comparative psychologists and neuroscientists who have developed new experimental approaches apply their methods to a variety of issues dealing with primate vocal behavior and the neurobiology of the primate auditory system The synthesis of ethological and neurobiological approaches to primate vocal behavior presented in this book will yield a rich understanding of the acoustic and neural bases of primate audition and shed light on the evolutionary precursors to speech

New frontiers in the neuropsychopharmacology of mental illness Thibault Renoir, Laurence Lanfumey,Maarten Van Den

Buuse,2015-01-28 In recent years mental illnesses have become recognized as a huge emotional and financial burden to the individual their relatives and society at large Stress related and mood disorders as well as psychoactive substance abuse are among the disorders associated with most disability in high income countries Suicide which is often attributed to some underlying mental disorders is a leading cause of death among teenagers and young adults At the same time mental disorders pose some of the toughest challenges in neuroscience research There are many different categories of mental disorder as defined and classified by the Diagnostic and Statistical Manual of Mental Disorders DSM IV and the International Statistical Classification of Diseases 10th Revision ICD 10 Despite the ongoing improvements of those widely used manuals the validity and reliability of their diagnoses remain a constant debate However it has now become accepted by the scientific community that mental disorders can arise from multiple sources In that regard both clinical and animal studies looking at gene environment interactions have helped to better understand the mechanisms involved in the pathophysiology as well as the discovery of treatments for mental disorders This Research Topic aims to cover recent progress in research studying how genetic make up and environmental factors such as stress paradigm or pharmacological treatment can contribute to the development of mental disorders such as anxiety depression and schizophrenia This Research Topic also seeks to highlight studies looking at affective like disorders following the intake of drugs of abuse We also welcome all research articles review papers brief communications and commentary on topics related to the broad field of Neuropsychopharmacology

Better Health through Spiritual Practices Dean D. VonDras Ph.D.,2017-08-18 An

in depth examination of religious practices around the world and the fascinating science behind how they make us healthier. Many religious and spiritual beliefs promote wellness through their practices or stated objectives for example focusing on simple living having compassion for others vegetarianism or meditation and mindfulness. This refreshing work provides a review of the world's spiritual perspectives and traditions and explores how their guiding principles encourage healthy lifestyle choices. An examination of religious and nonreligious perspectives from around the world from atheism Confucianism and Christianity to Islam Judaism Shamanism and Zoroastrianism reveals how faith beliefs and values influence behavior and inspire healthy living. With contributions from leading international scholars the chapters include a discussion of Eastern and Western world religions and their practices such as fasting or the avoidance of alcohol and tobacco and how they may foster healthfulness. A contemporary analysis of current research findings suggests possible interventions that individuals and health providers may utilize to enhance healthfulness. A final chapter explores the connection between health illness and religious and nonreligious perspectives.

The Neuroscience of Cocaine Victor R Preedy, 2017-05-23 The Neuroscience of Cocaine Mechanisms and Treatment explores the complex effects of this drug addressing the neurobiology behind cocaine use and the psychosocial and behavioral factors that impact cocaine use and abuse. This book provides researchers with an up to date understanding of the mechanisms behind cocaine use and aids them in deriving new pharmacological compounds and therapeutic regimens to treat dependency and withdrawal symptoms. Cocaine is one of the most highly abused illicit drugs worldwide and is frequently associated with other forms of drug addiction and misuse but researchers are still struggling to understand cocaine's neuropharmacological profile and the mechanisms of its effects and manifestations at the cognitive level. Cessation of cocaine use can lead to numerous adverse withdrawal conditions from the cellular and molecular level to the behavioral level of the individual user. Written by worldwide experts in cocaine addiction this book assists neuroscientists and other addiction researchers in unraveling the many complex facets of cocaine use and abuse. Contains in each chapter an abstract key facts mini dictionary of terms and summary points to aid in understanding. Illustrated in full color. Provides unique full coverage of all aspects of cocaine and its related pathology. Provides researchers with an up to date understanding of the mechanisms behind cocaine use and aids them in deriving new pharmacological compounds and therapeutic regimens to treat dependency and withdrawal symptoms.

Addictive Substances and Neurological Disease Ronald Ross Watson, Sherma Zibadi, 2017-02-18 Addictive Substances and Neurological Disease: Alcohol, Tobacco, Caffeine and Drugs of Abuse in Everyday Lifestyles is a complete guide to the manifold effects of addictive substances on the brain providing readers with the latest developing research on how these substances are implicated in neurological development and dysfunction. Cannabis, cocaine and other illicit drugs can have substantial negative effects on the structure and functioning of the brain. However other common habituating and addictive substances often used as part of

an individual's lifestyle i.e. alcohol, tobacco, caffeine, painkillers can also compromise brain health and effect or accentuate neurological disease. This book provides broad coverage of the effects of addictive substances on the brain, beginning with an overview of how the substances lead to dysfunction before examining each substance in depth. It discusses the pathology of addiction, the structural damage resulting from abuse of various substances, and covers the neurobiological, neurodegenerative, behavioral, and cognitive implications of use across the lifespan from prenatal exposure to adolescence and old age. This book aids researchers seeking an understanding of the neurological changes that these substances induce and is also extremely useful for those seeking potential treatments and therapies for individuals suffering from chronic abuse of these substances. Integrates current research on the actions of addictive substances in neurological disease. Includes functional foods such as caffeine beverages that have habituating effects on the brain. Provides a synopsis of key ideas associated with the consequences of addictive and habituating lifestyle substances.

Modulation of Sleep by Obesity, Diabetes, Age, and Diet

Ronald Ross Watson, 2014-09-14. Sleep disorder is a rampant problem in the US with over 40 million Americans currently diagnosed according to the NIH. There is a clear association between sleep disorder and a wide range of other human disorders, performance deficiencies, psychiatric illnesses, heart disease, obesity, and more, but in spite of this, there is not yet a convenient overview on the market detailing the impact of obesity, age, diabetes, and diet on sleep duration and attendant health outcomes. This volume focuses on the interaction between sleep and these factors, with special attention being paid to the potential for neurological modulation of sleep via diet. The volume aids readers in understanding the role each of these factors plays in sleep architecture and its regulation by circadian biology and neurology. Aids in understanding the impact of age, diet, obesity, and disease on sleep. Offers focus on neurological changes that affect metabolism. Explores diabetes induced sleep problems. Aids to understanding the multifactorial causes of age related sleep dysfunction. Addresses selected studies of nutraceuticals affecting sleep for potential application clinically. Discusses major
